GSX-R600 (1997-2000)

From the single-cylinder bikes of the 1950s to the high-performance sportbikes of today, *The Complete Book of Ducati Motorcycles* showcases the entire spectrum of Ducati. Legendary Ducati motorcycles have something of a rags-to-riches story. This Italian motorcycle manufacturer began by selling motorized bicycles to impoverished residents of post-World War II Italy. Today, Ducati is the world's premier manufacturer of street motorcycles whose sales continue to rise year after year. Its svelte, hyper-accelerating motorcycles are two-wheeled wonders that are fluent in the language of speed. *The Complete Book of Ducati Motorcycles* traces the stunning chronology of the motorcycles dreamed up

Advanced statistics and new terminology have taken hold of baseball today, but do they accurately reflect the reality of the game? A baseball lifer states his case. America's favorite pastime is enduring an assault of new thoughts and ideas. In recent years, the sabermetrics and analytics craze has infiltrated Major League Baseball—from its front offices to dugouts to clubhouses to media covering both, inciting a baseball culture war. New phrases like “launch angle,” “spin rate,” and “pitch framing” have entered the vocabulary, often with little real meaning when it comes to how the game is actually

played on the field. No more. In *State of Play*, twelve-year Major League veteran, Emmy Award-winning MLB Network analyst, and bestselling author Bill Ripken breaks down these modern statistical methods to explain which ones make sense in the game's historical context, bringing them together with proven old-school strategies. He simplifies those sabermetric terms hastily added to the baseball lexicon without being fully realized, taking new-school confusion out of old-school baseball's tried-and-true common sense. In the end, he unites the teachings of each school to show fans of both how to listen to and understand the game as it's played today and how it should be played moving forward. From a true baseball lifer and member of baseball's first family, *State of Play* offers a fascinating insider's look at how to reconcile years of historical tradition with the rules and trends of the

OUR CULTURE HAS BECOME OBSESSED WITH HUSTLING. As we struggle to keep up in a knowledge economy that never sleeps, we arm ourselves with life hacks, to-do lists, and an inbox-zero mentality, grasping at anything that will help us work faster, push harder, and produce more. There's just one problem: most of these solutions are making things worse. Creativity isn't produced on an assembly line, and endless hustle is ruining our mental and physical health while subtracting from our creative performance. Productivity and Creativity are not compatible; we are stuck between them, and like the opposite poles of a

magnet, they are tearing us apart. When we're told to sleep more, meditate, and slow down, we nod our heads in agreement, yet seem incapable of applying this advice in our own lives. Why do we act against our creative best interests? **WE HAVE FORGOTTEN HOW TO FLOAT.** The answer lies in our history, culture, and biology. Instead of focusing on how we work, we must understand why we work—why we believe that what we do determines who we are. *Hustle and Float* explores how our work culture creates contradictions between what we think we want and what we actually need, and points the way to a more humane, more sustainable, and, yes, more creative, way of working and living.

revolutionize the world. The United States' accelerated plans to combat the existential threat of climate change finally give reason to hope. In *Our Livable World*, research specialist and author Marc Schaus explores the incredible new green innovations in science and engineering that can allow us to avoid the worst repercussions of global warming as we work to usher in a sustainable, livable world. To beat a challenge the size of climate change, our solutions will have to be ambitious: solar thermal cells capable of storing energy long after the sun goes down, "smart highways" designed to charge your vehicle as you drive, indoor vertical farms automated to maximize crop growth with no pesticides, bioluminescent vines ready to one day replace our streetlights, jet fuel created from landfill trash—and next-generation carbon capture techniques to remove the emissions we
