What is sound? Sound is created when something vibrates and sends waves of energy (vibration) into our ears . The vibrations travel through the air or another medium (solid, liquid or gas) to the ear. The stronger the vibrations, the louder the sound. Sounds are fainter the further you get from the sound source.

It's a clean sound, with no jagged edges or lumbering lows to blight the smooth delivery. However, the 360-degree dispersion means there's an element of diffusion to the speaker's sound. While that does give the BeoSound 1 an easy-going presentation, it's also responsible for the vague, hazy quality to the sound.

*B&O BeoSound 1 review | What Hi-Fi?*

Well, sounds are made when objects - like this string - vibrate. When it vibrates it makes a sound...and when it's not vibrating it makes no sound at all! Every time an object vibrates, it sends...
