What makes a horror television drama interesting? Like any other drama, it is often the character development or plot, and this certainly applies to the dramatically-resonant *Supernatural* and its beloved characters. However, *Supernatural* has achieved a dedicated fandom and a record-breaking 15-season run by skillfully engaging with the

social reality inhabited by the show's audience. Additionally, the show plays with the fourth wall by having an in-world fandom for the main characters. Supernatural's many layers have garnered the attention of academics who analyzed the show's engagement with diverse topics such as the #MeToo movement, consumerism, and the American Dream. This collection of essays studies the topical issues and politics that added depth and maturity to Supernatural, separated it from X-Files knock-offs, and garnered the show its own cult following.

How we can evade, protest, and sabotage today's pervasive digital surveillance by deploying more data, not less—and why we should. With *Obfuscation*, Finn Brunton and Helen Nissenbaum mean to start

a revolution. They are calling us not to the barricades but to our computers, offering us ways to fight today's pervasive digital surveillance—the collection of our data by governments, corporations, advertisers, and hackers. To the toolkit of privacy protecting techniques and projects, they propose adding obfuscation: the deliberate use of ambiguous, confusing, or misleading information to interfere with surveillance and data collection projects. Brunton and Nissenbaum provide tools and a rationale for evasion, noncompliance, refusal, even sabotage—especially for average users, those of us not in a position to opt out or exert control over data about ourselves. Obfuscation will teach users to push back, software developers to keep their user data safe, and policy makers to gather data without misusing it. Brunton and Nissenbaum present a guide to the forms and formats that obfuscation has taken and explain how to craft its implementation

to suit the goal and the adversary. They describe a series of historical and contemporary examples, including radar chaff deployed by World War II pilots, Twitter bots that hobbled the social media strategy of popular protest movements, and software that can camouflage users' search queries and stymie online advertising. They go on to consider obfuscation in more general terms, discussing why obfuscation is necessary, whether it is justified, how it works, and how it can be integrated with other privacy practices and technologies.

Screenwriter, director, producer and comic book author Joss Whedon is best known for his television series and films featuring villainous vampires, angry gods and even bloggers who wish to rule the world.
