In order to address long-standing economic challenges, in 2016 the Government of Egypt (GOE) put in place a major economic reform program to restore macroeconomic stability and to promote inclusive growth. As a result, there are early signs that the economy is rebounding and Egypt ' s economic outlook is becoming more favorable. However, it is less clear how the ongoing reform program is affecting households, especially the poor. To shed light on this question, this paper uses an economy-wide model to estimate the distributional impacts of the energy subsidy cuts in 2014, 2016, and 2017, the currency devaluation at the end of 2016, and the expected complete phasing out of energy subsidies over the coming years.

(IEO2013) projects that world energy consumption will grow by 56 percent between 2010 and 2040. Total world energy use rises from 524 quadrillion British thermal units (Btu) in 2010 to 630 quadrillion Btu in 2020 and to 820 quadrillion Btu in 2040 (Figure 1). Much of the growth in energy consumption occurs in countries outside the Organization for Economic Cooperation and Development (OECD),² known as non-OECD, where demand is driven by strong, long-term economic growth. Energy use in non-OECD countries increases by 90 percent; in OECD countries, the increase is 17 percent. The IEO2013 Reference case does not incorporate prospective legislation or policies that might affect energy markets.
