Anyhow, in 1988, Seiko decided to end production of the 6309 series of movements and replaced this watch with the Seiko 7002 and its 7000-series of movements. We'll never truly know why Seiko made the switch, but a look at the movement shows stamped versus machined parts, a lot more plastic, and less expensive finishing.

## INFORMATION AND IMAGES ON U.S. MILITARY WRIST WATCHES THAT WERE ISSUED TO SERVICE MEMBERS OF THE ARMED FORCES FROM WWII AND UP TO IRAQ

Seiko has built a legacy of creating purpose-built watches for professional adventurers. When did this legacy begin? Rediscover the lost history of Seiko's first professional mountaineer's watch. Follow the men whose challenge for glory took them to the savage and extraordinary mountain Gyachung Kang.

Dealing with a complicated watch used to be a rare job for the watch repairer, but with the popularity of the automatic, it is almost commonplace. Furthermore, the increased interest in calendar work, alarm watches, and chronographs will undoubtedly bring more and more complicated work into the workshop. This book deals with complicated work essentially from the repairer's point of view. The action of each mechanism is briefly and clearly described because understanding this is essential to proper servicing, repair and testing for functioning. Dismantling and assembly instructions are given, as well as oiling charts and - most important - hints on fault-finding and their rectification. Another essential feature of the book is that it deals with all complicated work - from the relatively simple automatic to the triple-complicated watch with chronograph, calendar and repeater work, and the very complicated clock watch. Exceptional care has been taken in the preparation of diagrams, which have been drawn from actual movements in various stages of assembly, so that the reader can actually work with the book illustrations beside the watch itself. As always with books by Donald de Carle, instructions are easy to follow and there is no reason why anyone well versed in ordinary work and able to use watchmakers' tools should not become a specialist in complicated watches and their repair.

Time passes, time is captured, time flies-and in no other place does it do those things better than in the hands of the twelve men whose narratives make up the substance of 12 Faces of Time. Each of these epoch-making watchmakers active in the realm of haute horlogerie has a distinct story to tell; in the hands of these masters, time becomes tangible, perpetual, and personal. 12 Faces of Tinte portrays well-known horological figures such as François-Paul Journe, Vianney Haller, and Philippe Dufour as they've never been seen before and also provides unique insight into major independent horologists like Finnish chronometer specialist Kari Voutilainen, Felix Baumgartner of Urwerk fame, triple-axis tourbillon technician Thomas Prescher, German wunderkind Volker Vyskocil, English contender to the horological crown Roger Smith, resonance specialist Beat Haldimann, and Paul Gerber, Guinness Book of world Records holder. Two men very rarely seen in the press are also portrayed here: Dr. Ludwig Oechslin is not only the curator of the Musée International d'Horlogerie in La Chaux-de-Fonds, but also the movement de-signer of some of Ulysse Nardin's most complicated and forward-thinking works of art and creator of the MIH watch. Kenji Shiohara is the innovative Japanese watchmaker who founded a mini-department for high watchmaking within Japan's gargantuan Seiko Corporation, bringing forth the first Japanese-themed and experdy finished sonnerie-using Seiko's Spring Drive movement as the basis. These twelve technical magicians are portrayed in their own environments along with plenty of their mechanical wizardry, providing impressions of what makes them unique. 12 Faces of Time is not only for passionate aficionados of high watchmaking, but anyone interested in artistic photography and beautiful imagery. A feast for all of the senses, you can expect to practically hear the ticking of the rare and unique timepieces alongside the exotic accents of the masterful thinkers and gifted watchmakers speaking from the pages to introduce their life's work-one that comprises an age-old craft. Embodying the animated yin-yang that is modern mechanical watchmaking, these twelve faces of time represent very different corners of the highest level of watchmaking: individual-and individualistic-styles of this timeless mechanical art.

The last decade has witnessed a rapid surge of interest in new sensing and monitoring devices for wellbeing and healthcare. One key development in this area is wireless, wearable and implantable in vivo monitoring and intervention. A myriad of platforms are now available from both academic institutions and commercial organisations. They permit the management of patients with both acute and chronic symptoms, including diabetes, cardiovascular diseases, treatment of epilepsy and other debilitating neurological disorders. Despite extensive developments in sensing technologies, there are significant research issues related to system integration, sensor miniaturisation, low-power sensor interface, wireless telemetry and signal processing. In the 2nd edition of this popular and authoritative reference on Body Sensor Networks (BSN), major topics related to the latest technological developments and potential clinical applications are discussed, with contents covering. Biosensor Design, Interfacing and Nanotechnology Wireless Communication and Network Topologies Communication Protocols and Standards Energy Harvesting and Power Delivery Ultra-low Power Bio-inspired Processing Multi-sensor Fusion and Context Aware Sensing Autonomic Sensing Wearable, Ingestible Sensor Integration and Exemplar Applications System Integration and Wireless Sensor Microsystems The book also provides a comprehensive review of the current wireless sensor development platforms and a step-by-step guide to developing your own BSN applications through the use of the BSN development kit.

The phenomena of Japan emerging as one of the most competitive industrial nations in the twentieth century and the general shift of competitiveness to East Asia since the 1980s have been widely studied by many scholars from different fields of the social sciences. Drawing on sources from Japanese, Swiss, and American archives, the historical analysis of this book tackles a wide range of actors and sheds light on the various processes that enabled Japanese watch companies to transfer technology and expand commercially starting in the second half of the nineteenth century. By exploring the case of the watch industry, this book serves to establish a better understanding of the origins of the competitiveness of Japanese manufacturing and its evolution until its decline in the post-bubble economy (in the 1990s and 2000s).
