This title is available online in its entirety in Open Access. Dutch Atlantic Connections reevaluates the role of the Dutch in the Atlantic between 1680-1800. It shows how pivotal the Dutch were for the functioning of the Atlantic system by highlighting both economic and cultural contributions to the Atlantic world.

"Books before print -manuscripts- were modified continuously throughout the medieval period. Focusing on the ninth and twelfth centuries, this volume explores such material changes as well as the varying circumstances under which handwritten books were produced, used and collected. An important theme is the relationship between the physical book and its

users. Can we reflect on reading practices through an examination of the layout of a text? To what extent can we use the contents of libraries to understand the culture of the book? The volume explores such issues by focusing on a broad palette of texts and through a detailed analysis of manuscripts from all corners of Europe" --Publisher's description.

The OECD-FAO Agricultural Outlook 2016-2025 provides an assessment of prospects for the coming decade of the agricultural commodity markets across 41 countries and 12 regions, including OECD countries and key agricultural producers, such as India, China, Brazil, the Russian Federation and Argentina.

photographs tell the definitive story of the American tractor's development, mechanical innovations, groundbreaking designs, and company histories. Best-selling author Randy Leffingwell researched and photographed restored classics and one-of-a-kind experimental models from coast-to-coast to deliver the goods on American farm tractor. This is the book that started it all! Previous hardcover edition (0-87938-532-4 pub 1991) has sold a staggering 150,000!

Thinking about the future is essential for almost all organizations and societies. States, corporations, universities, cities, NGOs and individuals believe they

cannot miss the future. But what exactly is the future? It remains a mystery – perhaps the greatest mystery, especially because futures are unpredictable and often unknowable, the outcome of many factors, known and unknown. The future is rarely a simple extrapolation from the present. In this important book, John Urry seeks to capture the many efforts that have been made to anticipate, visualize and elaborate the future. This includes examining the methods used to model the future, from those of the RAND Corporation to imagined future worlds in philosophy, literature, art, film, TV and computer games. He shows that futures are often contested and saturated with different interests, especially in relation to future generations.

He also shows how analyses of social institutions, practices and lives should be central to examining potential futures, and issues such as who owns the future. The future seems to be characterized by 'wicked problems'. There are multiple 'causes' and 'solutions', long-term lock-ins and complex interdependencies, and different social groups have radically different frames for understanding what is at stake. Urry explores these issues through case-studies of 3D printing and the future of manufacturing, mobilities in the city, and the futures of energy and climate change.

impacts of a regional HOV system (Purvis, class).

"Presents 100 samples of organic substances characterized under identical conditions by thermogravimetry (TG) and differential thermal analysis (DTA) in addition to proximate analysis-providing accurate information essential in research and engineering applications related to fuel preparation. Discusses nonisothermal kinetic techniques, mathematical models, and other parameter estimation procedures that facilitate the extrapolation of results obtained under various conditions-including the Gaur and Reed method, an important advance in understanding the kinetics of thermal data!"
