Color Atlas of Ultrasound Anatomy, Second Edition presents a systematic, step-by-step introduction to normal sectional anatomy of the abdominal and pelvic organs and thyroid gland, essential for recognizing the anatomic landmarks and variations seen on ultrasound.

This Color Atlas of Anatomy features full-color photographs of actual cadaver dissections, with accompanying schematic drawings and diagnostic images. The photographs depict anatomic structures with a realism unmatched by illustrations in traditional atlases and show students specimens as they will appear in the dissection lab. Chapters are organized by region in order of standard dissection, with structures presented both in a systemic manner, from deep to surface, and in a regional manner. This edition has additional clinical imaging, including MRIs, CTs, and endoscopic techniques. New graphics include clinically relevant nerve and vessel varieties and antagonistic muscle functions. Many older images have been replaced with new, high-resolution images. Black-and-white dissection photographs have been replaced with color photography. A companion website will include an Image Bank, interactive software (similar to an Interactive Atlas), and full text online.

Atlas of human anatomy which covers surface anatomy, osteology, clinical/anatomical relationships and neuroanatomy. It presents the reality of the dissecting room, directly relating to the clinical training of the student. Illustrations are life-size and organized for self-study and self-testing.

This book is a fundamental guide to understanding plant structure offering plant scientists, plant biologists and horticulturalists in practice, academic life and in training. This extensively color-illustrated atlas serves as a comprehensive guide not only to persons actively involved in food quality control but also to students and trainees, as well as to nontechnical food industry personnel who wish to enhance their product knowledge. Each chapter is devoted to a commodity group (e.g., fresh meats) with two non-commodity chapters concerned with precepts of food quality control and foreign bodies and infestations. Those foods similar in nature and which could be placed in more than one chapter are cross-referenced. Extensively Illustrated Illustrations were selected based on those quality defects most commonly encountered at retail or final inspection level, together with less common defects which illustrate a point of particular significance. Rare cases of actual spoilage or visible quality deterioration of some shelf-stable products are provided to serve as a reference point. Particular attention in this respect is paid to "exotic" imported goods such as Oriental fermented products, the nature of which may be unfamiliar to many persons involved in food inspection. Covers Technical Aspects of Quality Control The atlas is primarily concerned with the technical aspects of quality control. The visual faults illustrated are related to the manufacturing technology involved, where possible, in order to identify their cause. In addition, examples of laboratory tests which may be of value in confirming visual diagnoses are included. Food poisoning agents (microbial or chemical in nature) which cannot usually be detected by visual examination and specific problems of a public health nature are also discussed.

Rated among the most widely adopted anatomy texts in the world, this atlas is the only one to fully cover surface anatomy, osteology, clinical/anatomical relationships, and neuroanatomy, as well as general gross anatomy. Graphic line illustrations and modern imaging are included.

Updated and revised, this atlas provides clinical pictures, radiographs and histological specimens of the common and some of the less common conditions encountered in the field of rheumatology. It features expanded explanatory text and many new illustrations.
