Meeting of Minds

Meeting of the minds is a phrase in contract law used to describe the intentions of the parties forming the contract. In particular, it refers to the situation where there is a common understanding in the formation of the contract. Formation of a contract is initiated with a proposal or offer. This condition or element is considered a requirement to the formation of a contract in some jurisdictions.

Meeting Minds | A Podcast for Meeting Planners and Event Pros

What is truly needed is a meeting of minds, said the bishop, who serves as the chair of the Office for Migration Policy at the Catholic Bishops' Conference of England and Wales.

The man who invented the television talk show surpassed even himself when he created Meeting of Minds, the award-winning series that captured America's imagination. These four volumes offer the original scripts from the series, including material edited from the broadcast versions that ran from 1977 to 1981 on PBS stations nationwide. Many believe that Meeting of Minds is the most brilliant series ever to be written for television. The show provides a groundbreaking opportunity to be exposed to ideas by way of a medium not normally known for its intellectual vigor. Indeed, Meeting of Minds grew out of Allen's frustration with the mediocrity of the average network program. He envisioned the show as a stimulating round-table discussion conducted like any other talk show - except that the participants would be actors portraying some of the greatest minds and most prominent figures of history. Accordingly, such characters as Aristotle, Catherine the Great, Oliver Cromwell, Emily Dickinson, Margaret Sanger, Gandhi, Thomas Paine, Cleopatra, Theodore Roosevelt, and St. Thomas Aquinas appear in startlingly effective juxtaposition, their characters revealed through brilliantly conceived dialogue. This first volume features appearances by President Theodore Roosevelt, Queen Cleopatra, Thomas Aquinas, Thomas Paine, President Ulysses S. Grant, Queen Marie Antoinette, Sir Thomas More, Karl Marx, Charles Darwin, Emily Dickinson, Galileo Galilei, and Attila the Hun. The scripts for Meeting of Minds make for excellent reading, distilling an enormous amount of research into a lively format that has the undeniable veracity of historical fact. The result is unfailingly witty, thought-provoking, and genuinely entertaining. Steve Allen's lucidity and fertile intelligence are evident on every page. Meeting of Minds remains one of the freshest, most delightful ways of gaining historical perspective ever devised, an incomparable tour de force with the power to make history come alive.

In this richly nuanced assessment of the various dimensions of mutuality in psychoanalysis, Aron shows that the relational approach to psychoanalysis is a powerful guide to issues of technique and therapeutic strategy. From his reappraisal of the concepts of interaction and enactment, to his examination of the issue of analyst self-disclosure, to his concluding remarks on the relational import of the analyst's ethics and values, Aron squarely accepts the clinical responsibilities attendant to a postmodern critique of psychoanalytic foundations.

and values, Aron squarely accepts the clinical responsibilities attendant to a postmodern critique of psychoanalytic foundations.

Comic in tone and serious in intent, this book gives a vivid portrait of academic life in the nineties. With campus populations and critical perspectives changing rapidly, academic debate needs to look beyond the old ideal of common purposes and communal agreement. How can we learn from people we won't end up agreeing with? This question is explored by four very different scholars, who meet and argue at a series of comparative literature conferences: David Damrosch, liberal humanist and organizer of the group; Vic Addams, an independent scholar of aesthetic leanings (and author of *The Utility of Futility*); Marsha Doddvic, a feminist film theorist; and the Israeli semiotician Dov Midrash. Throughout the 1990s, in four cities, they meet and debate the problems of disciplinary definition and survival, the relation of literary theory to society, the politics of cultural studies, and the virtues and vices of autobiographical criticism. As their partly antagonistic, increasingly serious, surprisingly fond, and always funny relationship develops, Damrosch seeks common ground with his friends despite the fundamental differences among them. Can a self-parodying deconstructionist and a Proust aficionado appreciate and improve each other's work? Can a wealthy, windsurfing medievalist and a champion of Chicana lesbian memoir find friendship? Hilarious exchanges and comic moments, as well as cameo appearances by well-known theorists, will entertain all literary-minded readers. Academic insiders will also be reminded of the foibles and quirks of their own disciplines and departments. At the same time, this exploration of the uses and abuses of literary and cultural criticism offers a running commentary on identity politics and poses serious questions about the state and future of the academy.

This progressive rhetoric provides strategies for inquiry-driven reading and research as well as source-based, academic writing and argument.

The pioneering work of Nobel prize-winning physicist Wolfgang Pauli led to developing the bombs that decimated Hiroshima and Nagasaki. Desperate over this outcome, Pauli sought help from the eminent depth psychologist, C. G. Jung. Their long correspondence provides the powerful and unique record of a mature scientist's inner journey. It also has had a tremendous impact on scientific and psychological thought ever since. *Pauli and Jung* is a lucid interpretation of Pauli's ideas and dreams that forcefully validates his belief in the inseparable union of science and spirituality. Far ahead of their time, Wolfgang Pauli and C. G. Jung both knew this union is essential for the future of humanity and the survival of the planet.

Argues that businesses need to view customers as an extension of the company, and suggests ways company departments can work together and still maintain their functional specialties

This book offers practitioners, teachers and students of psychotherapy a detailed and comprehensive account of group analysis. It demystifies the workings of analytic groups and looks at the great stretch of issues and tasks confronting the therapist in the practice of group analytic psychotherapy. Each stage in the process is fully discussed: the assessment and preparation of patients for groups, dynamic administration, beginning and ending a group, and the introduction of new members into an established group. A chapter on psychopathology gives a picture of the main psychiatric conditions which the group therapist is likely to encounter, and offers clear guidelines on how to manage them in a group context. An exposition on the group in full flow provides an unusual insight into the processes which constitute the analytic culture, including the analysis of dreams, the art of interpreting, use of the transference and countertransference, and the place of play, humour and metaphor. Difficult and challenging scenarios, such as dropping out, scapegoating, the silent group member, and monopolisation of the group are treated in depth, as are Large Groups, homogeneous groups, groups for children and adolescents, family therapy, groups in non-clinical settings, and the supervision of group therapy. The impingement of the

Online Library A Meeting Of Minds And Bodies Aeon 14 Us Gate Season 2

therapist's own personal issues is also given attention. The authors have flanked their narrative with accounts of the historical, social and cultural origins of group analysis, and a vision of the future provided by the newer strands of thinking in the field. The text is enlivened by colourful vignettes drawn from the authors' own experiences, and by sharply focused dialogues between the two authors, designed to illustrate their contrasting and complementary perspectives. The book represents a distillation of the authors' long experience in the field of group analytic practice and training in the United Kingdom and internationally.

Decipher the complex interplay of neurology, psychology, trauma, and memory! In the midst of the controversies over how repressed, false, and recovered memories should be interpreted, *Trauma and Cognitive Science* presents reliable original research instead of rhetoric. This landmark volume examines the way different traumas influence memory, information processing, and suggestibility. The research provides testable theories on why people forget some kinds of childhood abuse and other traumas. It bridges the cognitive science and clinical approaches to traumatic stress studies. Written by the foremost researchers in the field, including Bessel van der Kolk and Jennifer Freyd, these scientific evaluations of the way traumatic memories are processed offer powerful new perspectives on the interplay of biology and psychology. *Trauma and Cognitive Science* discusses a range of traumas, including combat, child abuse, and sexual assault across the lifespan. Fascinating perceptual experiments shed light on the cognitive uses of dissociation, the encoding and recall of memory, and the effects of early trauma on subsequent information processing. *Trauma and Cognitive Science* offers solid information on the most challenging questions in this field: How is memory encoded, stored, and retrieved? How is it forgotten? How does trauma influence these processes? What kinds of memories can be created by suggestion? What physical changes take place in the brain under traumatic stress? How is consciousness disturbed during and after trauma? What are the ethical, clinical, and societal implications of traumatic stress studies? How can people suffering from traumatic memories be healed? *Trauma and Cognitive Science* also offers an astonishing array of true case studies, including the story of an adult woman who was raped, went to court, and saw her rapist convicted--and then forgot the whole traumatic episode. The independently corroborated accounts of recovered memories and the carefully designed research studies on multiple modes and levels of memory may offer the key to understanding how we remember and why we forget. The results of these controlled scientific studies have wide-ranging implications for abuse survivors, combat veterans, rape victims, and people who have survived traumatic events from earthquakes to car accidents. Written in clear, accessible prose, *Trauma and Cognitive Science* belongs on the bookshelf of all mental health professionals, researchers in the areas of traumatic stress and child abuse, attorneys, judges, and survivors of abuse and trauma.
