In April 1943, a young officer arrived at Penshurst to join C Flight, 653 Squadron. He was no ordinary pilot and this was no ordinary RAF outfit. Lyell Munro was a soldier and 653 was an Air Observation Post Squadron whose pilots were Royal Artillery and whose ground crew were RAF. AOP pilots were expert gunners, skilled flyers and incurable rule breakers. Flying from airstrips just behind the front lines, without armament and often with no parachute, they controlled the fire of hundreds of guns and their enemies learnt to dread the sight of the little green Austers in the skies above the battlefield. An incautious movement, a puff of smoke or a chance flash of reflected sunlight could bring tons of high explosives raining down. They flew alone without ground control, scanning the skies constantly while they directed the guns. Closing at over 250mph, an attacking ME 109 left no time for indecision. Reactions had to be instinctive and evasive

action instant. Failure was fatal. After the War ended, the survivors went back into civilian life and few histories mention them or what they did. Lyells is one of only two personal accounts that are known to exist and it is likely that there will be no more. Written for his family and his comrades in C Flight it is a story told without heroics, but with a deep affection for the men with whom he flew and worked.

Over sixty years ago a battle took place that, if it had succeeded, could have shortened the Second World war by six months. The operation to take the bridges at Arnhem was given the code name 'Operation Market Garden', Market being the air side of the operation and Garden the subsequent ground operation. The main problem was communications between the ground forces and the re-supply aircraft of the Royal Air Force. Its their efforts and the courage on evident display at Arnhem that the book is based upon. Over a period of seven days troops of the 1st Airborne were taken by the RAF in towed gliders and then in subsequent days showed courage of the highest order to make sure that the ground troops were supplied with ammunition and food to sustain them in their efforts to take the bridges at Arnhem. Their efforts

## Access Free Above The Battle An Air Observation Post Pilot At War

were costly, 309 aircrew and 79 Air Dispatchers were killed and 107 aircraft, which included the men and aircraft who supported the main re-supply armada. One of the re-supply aircraft, flown by F/Lt David Lord DFC, was shot down. Lord was later awarded the Victoria Cross. His courage and dedication are exemplary of the efforts of the men of Transport Command to make sure the men on the ground were re-supplied. The men of the Air Dispatchers, or AD's as they were known, must always be remembered when regarding Arnhem. Their efforts to make sure the supplies were released from the aircraft, and on to the besieged men on the ground, was a vital factor in getting vital supplies to the troops successfully. This is their story, vividly told, and serves a commemorative purpose, memorialising both the events and, most importantly, the men who participated.

From an expert in the Pacific theater of World War II comes the tragic story of the pilots who fought the last fight of the war during the first hour of peace. When Billy Hobbs and his fellow Hellcat aviators from Air Group 88 lifted off from the venerable Navy carrier USS Yorktown early on the morning of August 15, 1945, they had no idea they were about to carry out the final air mission of World War II. Two hours later, Yorktown received word from Admiral Nimitz that the war had ended and that all offensive operations should cease. As they

## Access Free Above The Battle An Air Observation Post Pilot At War

were turning back, twenty Japanese planes suddenly dove from the sky above them and began a ferocious attack. Four American pilots never returned—men who had lifted off from the carrier in wartime but were shot down during peacetime. Drawing on participant letters, diaries, and interviews, newspaper and radio accounts, and previously untapped archival records, historian and prolific author of acclaimed Pacific theater books, including *Tin Can Titans* and *Hell from the Heavens*, John Wukovits tells the story of Air Group 88's pilots and crew through their eyes. *Dogfight over Tokyo* is written in the same riveting, edge-of-your-seat style that has made Wukovits's previous books so successful. This is a stirring, one-of-a-kind tale of naval encounters and the last dogfight of the war—a story that is both inspirational and tragic.

Much has been written about the Battle of the Somme. From July through late November 1916, British, French, and German armies fought one of the costliest battles of the twentieth century. Well over a million casualties and only a few miles of ground gained by the Allies were the result when the battle ended. Little, however, has been written about the second battle which occurred simultaneously, this one in the skies above the Somme, where for the first time in the history of warfare a deliberate attempt was made to control the sky. The British

Royal Flying Corps, under the resolute command of General Sir Hugh Trenchard, fought to gain air supremacy from the German Air Service. Trenchard believed that the best way to support the ground force was to dominate and control the sky above the battlefield. This air campaign was critical because of its impact on the doctrine and theory of air warfare which followed it. This study examines the efforts of the Royal Flying Corps to gain air supremacy against the German Air Service before and during the Battle of the Somme.

This book presents the first comprehensive analysis of the debate over how the United States and its allies can counter China's rapidly growing military power.

Noted aviation historian Robin Higham examines the evolution of the Armée de l'Air and RAF during the interwar period. Although France and England shared a mutual enemy in Germany, the development of the air forces of in each nation shared few commonalities. Higham demonstrates that the Armée de l'Terre dominated strategic and doctrinal planning

## Access Free Above The Battle An Air Observation Post Pilot At War

in France. The resulting emphasis on traditional land warfare, combined with the volatility of French politics in 1920s, blunted the development of French air forces. By 1940, they were ill prepared, technologically inferior, and out manned when the Luftwaffe aircraft darkened the skies over the French countryside. Although the causes of the defeat of France in 1940 have been debated by historians, none have focused on the role and place of the Armée de l'Air in that defeat. Historians of France have been much more comfortable arguing about politics and the Armée de Terre. As Higham illustrates, however, it is important understand the impact of the development of the Armée de l'Air, its doctrine, equipment, personnel, and budgets. Comparatively, the success of the Royal Air Force in the skies over Britain was due largely to the fact that the independent RAF evolved into a sophisticated, scientifically based force, supported by consistent government practices. Higham's thorough examination, however, finds the British not without error in the two decades that followed the Treaty of Versailles. But strong government support and technological innovation during this period paved the way for success once the war began.

The Battle of France saw German forces sweep across the Low Countries and towards Paris, crushing Allied resistance in just six weeks. From
