ACI Concrete Field Testing Technician Certification Course—

The American Concrete Institute (ACI) is a leading authority and resource worldwide for the development and distribution of consensus-based standards, technical resources, educational programs, certification programs, and proven expertise for individuals and organizations involved in concrete design, construction, and materials, who share a commitment to pursuing the best use of concrete.

This standard defines the qualification requirements to qualify welding inspectors. The qualification requirements for visual welding inspectors include experience, satisfactory completion of an examination which includes demonstrated capabilities, and proof of visual acuity. The examination tests the inspector's knowledge of welding processes, welding procedures, nondestructive examinations, destructive tests, terms, definitions, symbols, reports, welding metallurgy, related mathematics, safety, quality assurance and responsibilities.

The ACI Certification Program for Concrete Field Testing Technician—Grade I has been developed for the purpose of certifying concrete technicians who have demonstrated the knowledge and ability to properly perform the basic field tests on freshly mixed concrete. The increasing demand for certification by many governmental agencies has made it desirable for ACI to accept leadership in creating and maintaining a certification program to improve the accuracy and reliability of the field testing of freshly mixed concrete. In addition to upgrading the quality of concrete construction, this program is intended to prepare the industry for the possibility of future mandatory certification, and to form the basis for higher level certification programs. Technicians who upgrade their skills and credentials through ACI certification will increase their own opportunities as well as contribute to the advancement of the industry. This Technician Workbook (CP-1) describes the operation of the ACI Certification Program and provides technical materials and directions necessary to prepare for the examinations. -iii.

The newest publication from the Tilt-Up Concrete Association is the second in a planned trilogy of resources covering the architecture, engineering and construction of Tilt-Up. Continuing the high quality with which „The Architecture of Tilt-Up, was printed and assembled, the new (10₁ x 10₁) book presents state-of-the art information and large colorful imagery of the construction process. Topics include: planning, slabs and foundations, panel layout and forming, reinforcement, inserts and embedded items, placing and finishing of the panels, lifting, setting and bracing of the panels, connections and finishing touches.
