The International Bestseller "Consistently entertaining...Honesty is abundantly apparent here—a quality as rare and commendable in elite surgeons as one suspects it is in memoirists." —The Guardian "Disarmingly frank storytelling...his reflections on death and dying equal those in Atul Gawande's excellent Being Mortal." —The Economist Henry Marsh has spent a lifetime operating on the surgical frontline. There have been exhilarating highs and devastating lows, but his love for the practice of neurosurgery has never wavered. Following the publication of his celebrated New York Times bestseller Do No Harm, Marsh retired from his full-time job in England to work pro bono in Ukraine and Nepal. In Admissions he describes the difficulties of working in these troubled, impoverished countries and the further insights it has given him into the practice of medicine. Marsh also faces up to the burden of responsibility that can come with trying to reduce human suffering. Unearthing memories of his early days as a medical student, and the experiences that shaped him as a young surgeon, he explores the difficulties of a profession that deals in probabilities rather than certainties, and where the overwhelming urge to prolong life can come at a tragic cost for patients and those who love them. Reflecting on what forty years of handling the human brain has taught him, Marsh finds a different purpose in life as he approaches the end of his professional career and a fresh understanding of what matters to us all in the end.

'Sensational' SUNDAY TIMES NO. BESTSELLER 'Extraordinary...both exhilarating and alarming...fascinating' DAILY MAIL 'Wonderful...a testament to the tenacity of the human spirit' FINANCIAL TIMES Henry Marsh has spent four decades operating on the human brain. In this searing and provocative memoir following his retirement from the NHS, he reflects on the experiences that have shaped his career and life, gaining a deeper understanding of what matters to us all in the end.

Henry Marsh has spent a lifetime operating on the surgical frontline. There have been exhilarating highs and devastating lows, but his love for the practice of neurosurgery has never wavered. Prompted by his retirement from his full-time job in the NHS, and through his continuing work in Nepal and Ukraine, Henry has been forced to reflect more deeply about what forty years spent handling the human brain has taught him.Moving between encounters with patients in his London hospital, to those he treats in the more extreme circumstances of his work abroad, Henry faces up to the overwhelming burden of responsibility that can come with trying to reduce human suffering. Unearthing memories of his early days as a medical student, and the experiences that shaped him as a young surgeon, he explores the difficulties of a profession that deals in probabilities rather than certainties, and where the consequences of your decisions alter not just the life of a patient but also of those around them. The overpowering human urge to prolong life can often come at a great cost to those who are living it, and to those who love them.In this searing, provocative and deeply personal memoir, the bestselling author of DO NO HARM finds new purpose in his own life as he approaches the end of his professional career and a fresh understanding of what matters to us all in the end.

The story of one man's evolution from naive and ambitious young intern to world-class neurosurgeon. With poignant insight and humor, Frank Vertosick Jr., MD, describes some of the greatest challenges of his career, including a six-week-old infant with a tumor in her brain, a young man struck down in his prime by paraplegia, and a minister with a .22-caliber bullet lodged in his skull. Told through intimate portraits of Vertosick's patients and unsparing yet fascinatingly detailed descriptions of surgical procedures, When the Air Hits Your Brain—the culmination of decades spent struggling to learn an unforgiving craft—illuminates both the mysteries of the mind and the realities of the operating room.

Life is indeed a game that we all play to pass time, simply a series of days strung together, made up of how you planned or decided to spend the moments. Like any game how well it is played or whether life's circumstances are interpreted accurately, then used to the best advantage, makes losers and winners to varying degrees. Senseless insanity is alive and well within the world. The world is awash with unruly forces, that if not intent upon harming you do desire to become a destabilising force, either temporarily or over the long term. We are all participants in a charade, how life evolves and turns out all depend on how well the game is played. It is not wise or ideal to treat life like a game of chance, a random roll of the dice that can determine unpredictable outcomes. The cost of success is the careful application of well thought out concepts and ideas. Like any game preparation is critical, understanding the rules, knowing how to manipulate the dynamics at play efficiently to ones own advantage, understanding the intricacies of the rules and how to capitalise upon or create opportunities, pursuing whatever circumstances are present to maximise whatever potential exists to the best advantage. The potential opportunities in life are only limited by the inability to firstly comprehend them and secondly to fully utilise personal abilities to maximise the potential that is available. Don't wait for special times to evolve, rather create them in accordance with your true desires to experience what you wish to make real. Much like any game, the game of life has things that can be obtained, or things that can be lost. How the game is played, the value of the stakes, the opposing factions all come to dictate an outcome, be that favourable or lacking any resemblance of being lucky. A life lived based upon any reliance on luck or fate being favourable is tempting only to the over optimistic, or those extremely lucky ones or who were fortunate in the past and believe that good fortune will continue in the future. While it takes resources to control the world, the control of your own specific world environment is really within your potential to achieve. How you choose to control your world, as well as to what extent your desires are put into action, determine whether your life will meet your wishes or not. The amount of thought and energy you exhort, the persistence of that effort, all comes to determine whether and to what degree what you want is what you actually get. In life you may win or loose at times, it's basically just like playing a game: the right mentality is chancing the wheel of life by trusting and ensuring you will win just the same.

Upton Sinclair, one of America's foremost and most prolific authors, addresses the cultivation of the mind and the body in this 1922 volume. Sinclair's goal was to attempt to tell the reader how to live, how to find health, happiness and success, and how to develop fully both the mind and the body. Part One: The Book of the Mind covers such subjects as faith, reason, morality, and the subconscious. Part Two: The Book of the Body develops such subjects as errors in diet, the fasting cure, food and poisons, work and play, and diseases and their cures.

Your Own Neuron is a daring adventure of parapsychology through the darkest and most enigmatic regions of the human mind. The human mind possesses various mysterious abilities that are often considered as science fiction. In this book the author investigates the foggy world of paranormal activities with the tools of modern neuroscience. International bestselling author, Neuroscientist Abhijt Naskar elucidates how the bizarre parapsychological phenomena such as telepathy, clairvoyance, precognition, premonition, afterlife do not possess any kind of paranormal element after all. The book illustrates the hardcore biological foundation behind all kinds of paranormal experiences. These fascinating experiences are the gift from Mother Nature that make human beings the most inexplicable species on planet earth.

Ever wonder why you find some tasks exhausting and others energizing? Or why you procrastinate certain activities - or would if you thought you could get away with it? Or why your brain learns some skills easily and struggles with others? Or why you are singing from the same song sheet with some individuals and always out of tune with others? Or if the prevailing wisdom that your brain really does differ from all of the previous or current brains is not a myth? Brain-function research is shedding light on these conundrums. The emerging information can help you purposefully use your brain to enhance success, make choices about work or career that match better with your own uniqueness, effectively manage your brain's energy for brain longevity, and enhance your understanding of yourself and others. And all with delight and by design!
