Abstract. An analytical evaluation of the thyroid stimulating hormone (TSH-3) assay on the Bayer ADVIA Centaur immunoassay system was performed. General analytical requirements (linearity, resistance to typical interferences, absence of a carry-over effect) were fulfilled and reproducibility was satisfactory. Inter-assay coefficient of variation (CV) of a human serum pool with a concentration of 0.014 mU/l was 22.3%; at concentrations between 0.26 and 83 mU/l CV was below 6%.

Background. Thyroid-stimulating hormone (TSH) is used as the first-line test of thyroid function. Siemens Healthcare Diagnostics recommend that Siemens Centaur reagents must be protected from light in the assay information and on reagent packaging. We have compared the effect of light exposure on results using Siemens TSH-3Ultra and follicle-stimulating hormone reagents.

A recent report in this journal by Rawlins and Roberts (1) compared 6 commercial third-generation assays for thyroid-stimulating hormone (TSH). The authors reported a functional sensitivity of 0.039 mIU/L for the ADVIA Centaur® TSH-3, in contrast to the manufacturer ' s claim of 0.019 mIU/L (2).
