Their plans are tested when an injured alien finds its way into their home and beats Melissa's pregnant body within inches of death. An amazing journey through what we do – and do not – know about how to defend ourselves before, during and after an alien invasion from space. What if there really are aliens and they do attack? Read what two scientists reveal in this "how-to" survival manual for the space age. Alien invasion. Unlikely? As unlikely as Pearl Harbor? The extinction of the dinosaurs? A meteor strike that levels whole forests in Siberia? You get the drift. In fact, it will be criminal and abrogation of our duty to future generations if we do not get ready! But where to begin? Drs. Travis S. Taylor and Bob Boan have the answers. Both are experienced scientists, physicists with expertise in both defense and military signal intelligence and experience working with both the Department of Defense and NASA. These are intellectual heavyweights who have a clear idea of the possibilities of alien contact, the calculations of whether or not that contact will be friendly...and what to do if it's not. An amazing journey through what we do – and do not – know about how to defend ourselves from space. Sure, that day may never come in our lifetimes – but everyone should have a copy of this lying around JUST IN CASE. Heck, better yet, why not commit a few of these scientists solutions to memory! Just in case. About Travis S. It should be on the reading list of anyone who is serious about national security and the future of war." — John Ringo, New York Times best-selling author of military SF "It looks like the time has come to take a serious look at planetary defense from all aspects. This book introduces the subject in a way to stir thoughtful and intelligent debate. Hats off to the authors." — Gerald B.
