for the beginner to eat. It also tries to go beyond that to generate awareness of the various vital roles the mushrooms play in the community of life and to spark an interest in their fascinating variations and adaptations. The full story of the importance of mushrooms in the plant world is far from being understood today, and only a little of it can be stated here. The mushroom that you see is a 'fruiting body', roughly equivalent to the fruit of other plants. The vegetative part of the mushroom plant is a thready mass hidden within the material it feeds upon - a log, cow dung, buried wood, an insect pupa or whatever. Mushrooms do not contain or need green chlorophyll, the substance which, in higher plants, captures the energy of sunlight to create biological energy. Mushrooms, like all the great groups of fungi to which they belong, get their energy second-hand. Many form beneficial partnerships with the trees of our forests and are essential to their well-being. No mushroom is either good or bad in the natural community of life.
