Anaesthesia and Intensive Care. The Anaesthesia and Intensive Care section, through its diverse clinical activities, is involved in a variety of areas including clinical anaesthesia, intensive care, post-operative pain control, chronic and persistent pain management, and aero-medical evacuation of casualties. Our undergraduate program revolves around the teaching of resuscitation and peri-operative medicine to the medical students during their clinical years.

Building on the success of previous editions, Anaesthesia and Intensive Care A-Z (Fifth edition) remains the most comprehensive single volume source of relevant aspects of pharmacology, physiology, anatomy, physics, statistics, medicine, surgery, general anaesthetic practice, intensive care, equipment, and the history of anaesthesia and intensive care. Originally prepared as essential reading for candidates for the Fellowship of the Royal College of Anaesthetists and similar exams, this fully updated edition will also prove as invaluable as ever for all anaesthetists and critical care physicians, as well as operating department practitioners and specialist nurses. All entries have been carefully reviewed and new ones added to reflect the latest advances and the evolving field breadth. This edition includes a structured checklist of entries, ordered by curriculum core topic area, as an additional new aid for those planning their revision. Also for the first time, this fifth edition now comes with complementary access to the complete electronic version of the book. It is now easy to use the content just as you need it, anytime, anywhere - whether online or offline, on your laptop, tablet or mobile device.

Revision of: Drugs in anaesthesia and intensive care / Martin Sasada and Susan Smith. 3rd ed. 2003.

Fifth edition of a market-leading pharmacology book for trainees, doctors and nurses working in operating theatres and critical care units.

Concise, highly illustrated text covers the key aspects of all imaging modalities of relevance to anaesthetists and intensivists.

The third edition of this market leading book has been thoroughly updated and expanded, with additional contributions from experts in the field, to include all new drugs available to the anaesthetist and intensive care specialist. Basic pharmacological principles, vital to understanding how individual drugs actually have their effects, are dealt with methodically and with many highly annotated diagrams and tables. With hospital infections becoming increasingly prevalent, the important section on antibiotics has been further expanded. With the third edition, this well established title continues to provide its readers with the most concise yet comprehensive coverage of all aspects of pharmacology. An ideal aid to study and practice for junior and trainee anaesthetists, critical care nurses and all physicians and healthcare professionals working in theatre, accident and emergency departments or intensive care units.

Concise anatomical text and descriptions of procedures are supported by high-quality, anatomical illustrations linked to clinical images.

Now fully updated, this clear, readable text is the essential guide all trainee anaesthetists need for revision and practice.

The anaesthesia and intensive care in infants and children have assumed positions of primary importance in contemporary medicine. In these delicate sectors of medicine, clinical research activities must be continually supported by interdisciplinary collaborations. Neonatal and pediatric intensive care requires that all involved physicians, including the surgeon and anesthesiologist, be willing to work together as a team. However, coordination of the various pathophysiological and clinical aspects of neonatal and pediatric critical medicine is highly complex. A complete and current review of the anaesthesia and intensive care of infants and children must include discussions of morbidity rates, so as to guide the clinicians in choosing the diagnostic approach, as well as of monitoring techniques appropriate to support the therapeutic decision. Recent progress in intensive care medicine for infants and children has been significant.

Covers essential information on maths, physics and clinical measurement for anaesthesia and critical care.

The latest volume in this very successful and long-established series to present a series of cutting-edge topics for anaesthetists.
