The endocrine system includes all of the glands of the body and the hormones produced by those glands. The glands are controlled directly by stimulation from the nervous system as well as by chemical receptors in the blood and hormones produced by other glands. By regulating the functions of organs in the body, these glands help to maintain the body's homeostasis.

Endocrine anatomy and physiology. The endocrine system is made up of various endocrine glands that each secrete hormones into the bloodstream. When hormones reach their target cell, they bind to a receptor on the cell's membrane or within that cell, and in response the target cell changes what it's doing. So at the end of the day, the endocrine system helps establish homeostasis - a sense of balance even when there are changes in the external environment.

The most primitive endocrine systems seem to be those of the neurosecretory type, in which the nervous system either secretes neurohormones (hormones that act on, or are secreted by, nervous tissue) directly into the circulation or stores them in neurohemal organs (neurons whose endings directly contact blood vessels, allowing neurohormones to be secreted into the circulation), from which they are released in large amounts as needed.

The endocrine system regulates our physiology via a complex cascade of chemicals called hormones Hormones play an essential role in maintaining homeostasis in the body Age-related hormonal changes can lead to the build-up of body fat, lower bone density, impaired blood glucose control and sleep disturbances

This is an integrated textbook on the endocrine system, covering the anatomy, physiology and biochemistry of the system, all presented in a clinically relevant context appropriate for the first two years of the medical student course. One of the seven volumes in the Systems of the Body series. Concise text covers the core anatomy, physiology and biochemistry in an integrated manner as required by system- and problem-based medical courses. The basic science is presented in the clinical context in a way appropriate for the early part of the medical course. There is a linked website providing self-assessment material ideal for examination preparation.
