Of the five senses, vision, without a doubt, is one of the most important. We have only two eyes and they must last a lifetime. And it is because this gift of sight is so precious, that fear of blindness is a universal concern. In light of this concern, Doctor Chalkley has written a concise yet easy-to-understand manual directed to eye patients, ophthalmology paraprofessionals and assistants and other interested individuals. In this latest edition, he has revised and updated information, added new illustrations and expanded chapter review questions. He covers general eye anatomy and physiology, light and vision, the conjunctiva, the cornea, cataracts, glaucoma, the uveal tract, the retina, neuro-ophthalmology, strabismus, eye changes associated with general diseases and eye injuries. The book concludes with a glossary and a helpful section of answers to often-asked questions.

Vision Facts is a question and answer guide to the wonders of the human eye, its complex structures and the process of visual perception. It traces the journey of vision from a ray of light entering the eye to the processing done by the brain, to the development and aging of the human visual system and common disorders associated with both processes. Organized in an intuitive question-and-answer format and accompanied by clear diagrams, Vision Facts provides answers regarding your vision in a manner accessible to all who are interested. Each topic includes references to external resources such as lecture notes and research papers for those who wish to delve deeper. It is a perfect handbook for anyone who is interested in visual science, sensory processing, neuroscience, or physiology; and is an excellent reference for anyone considering a career in ophthalmology or optometry. Some examples of the questions include the following. What is the resolution of the eye? Why do astronomers often cover flashlights with a red filter while stargazing? What is color-blindness and how does it occur? What role does vision play in the circadian rhythm? What chemical signals cause the eye to develop into its mature form? How does alcohol during pregnancy affect eye development? How well can a newborn baby see? How does being born prematurely affect vision? What is 20/20 vision? How does aging affect vision? These are all questions that are addressed in Vision Facts, along with countless more.
