With the advance of science and technology, there have been breakthroughs in the field of classical research and methods of map projection. Among these, computer science and space science have had the greater influence upon the field of research and the formation of a

working body of map projection, developing them in breadth and depth. This book reflects several aspects of the development of modern mathematical cartography, especially the theory and methods of map projection transformation. Map projection transformation is an area of research in mathematical cartography newly developed over the last 25 years. It is widely used in surveying and computer-assisted cartography, data processing for information systems, and the transformation of data from space, remote sensing, and other space sciences. The development of map projection transformation not only expands new areas of research on mathematical cartography, but it also further develops the applied area with the creation and application of map projection transformation software and mapping mathematics bases on the computer.

Three popular teens living in a small Florida town appear to have everything. Each is smart, beautiful, and charming but each holds a secret. On homecoming night, the three disappeared after a night of partying on a boat. Presumed dead, they are memorialized. Fifteen years later one of them is spotted in London on a grainy ATM photo. Tasked with investigating the photo, former FBI agent Miranda travels to Florida, a place she never thought she'd return to. Remembering the case well, after all her husband disappeared the same day as the teens, Miranda discovers the teens weren't what they appeared to be. Connecting the trio to a life of crime and deceit, Miranda begins to repair her life as the case unravels in front of her. What she thought was just a case of mistaken identity turns into a globe-hopping chase.
