At the centre of the Nazi Holocaust were the brothers Ludwig and Ernst Wolfgang Topf, who inherited the family business started by their grandfather in Erfurt near Weimar. Originally a brewery, Topf and Sons expanded into the heating business and by the 1930s they were leading manufacturers of cremation technology. A link with the nearby concentration camp at Buchenwald was initially created ...

Topf and Sons designed and built the crematoria at the concentration camps at Auschwitz-Birkenau, Buchenwald, Belzec, Dachau, Mauthausen and Gusen. At its height, sixty-six Topf triple muffle ovens were in operation - forty-six of which were at Auschwitz. In five years the gas chambers and crematoria of Auschwitz had been the engine of the holocaust, facilitating the murder and incineration of more than one million people, most of them Jews. Yet such a spectacularly evil feat of engineering was designed not by the Nazi SS, but by a small respectable firm of German engineers: the owners and engineers of J. A. Topf and Sons. These were not Nazi sadists, but men who were playboys and the sons of train drivers. They were driven not by ideology, but by love affairs, personal ambition and bitter personal rivalries to create the ultimate human killing and disposal machines - even at the same time as their company sheltered Nazi enemies from the death camps. The intense conflagration of their very ordinary motives created work that surpassed in its inhumanity even the demands of the SS. In order to fulfil their own 'dreams' they created the ultimate human nightmare.

The phrase, "the Culture of Death", is bandied about as a catch-all term that covers abortion, euthanasia and other attacks on the sanctity of life. In Architects of the Culture of Death, authors Donald DeMarco and Benjamin Wiker expose the Culture of Death as an intentional and malevolent ideology promoted by influential thinkers who specifically attack Christian morality's core belief in the sanctity of human life and the existence of man's immortal soul. In scholarly, yet reader-friendly prose, DeMarco and Wiker examine the roots of the Culture of Death by introducing 23 of its architects, including Ayn Rand, Charles Darwin, Karl Marx, Jean-Paul Sartre, Alfred Kinsey, Margaret Sanger, Jack Kevorkian, and Peter Singer. Still, this is not a book without hope. If the Culture of Death rests on a fragmented view of the person and an eclipse of God, the future of the Culture of Life relies on an understanding and restoration of the human being as a person, and the rediscovery of a benevolent God. The personalism of John Paul II is an illuminating

thread that runs through Architects, serving as a hopeful antidote.

The Balyan family were a dynasty of architects, builders and property owners who acted as the official architects to the Ottoman Sultans throughout the 18th and 19th centuries. Originally Armenian, the family is responsible for some of the most famous Ottoman buildings in existence, many of which are regarded as masterpieces of their period – including the Dolmabahçe Palace (built between 1843 and 1856), parts of the Topkapı Palace, the Çırağan Palace and the Ortaköy Mosque. Forging a unique style based around European contemporary architecture but with distinctive Ottoman flourishes, the family is an integral part of Ottoman history. As Alyson Wharton's beautifully illustrated book reveals, the Balyan's own history, of falling in and out of favour with increasingly autocratic Sultans, serves as a record of courtly power in the Ottoman era and is uniquely intertwined with the history of Istanbul itself.

A unique contribution to the architectural and social history of Bath, Architects, Angels, Activists and the City of Bath, 1765-1965: Engaging with Women's Spatial Interventions in Buildings and Landscape approaches the past with the methods of the architectural historian and the site-specific interventions of the contemporary artist. Looking beyond and behind Bath's strategic marshalling of its past, Cynthia Imogen Hammond presents the ways in which women across classes shaped the built environment and designed landscapes of one of England's most architecturally significant cities. This study argues that Bath's efforts to preserve itself as an idealized Georgian town reveal an aesthetics of exclusion. Jane Austen may be well known, but the role of historic women in the creation of this city has had minimal treatment within the city's collective, public memory. This book is an intervention into this memory; the author uses site-specific works of public art as strategic counterparts to her historical readings. Through them, she aims to transform as well as critique the urban image of Bath. At once a performative literature, an extensively researched history, and an alternative guide to the city, Architects, Angels, Activists engages with current struggles over urban signification in Bath and beyond.

This fully revised, new edition of Innovations in Hospice Architecture responds to the need for an up-to-date, theoretically based reference book summarizing key historical and recent developments with respect to this rapidly evolving building type. This Second Edition presents: an overview of the historical origins of the contemporary hospice the diverse variations on the basic premise of hospice care a review of the scant architectural literature published on this subject to date a broad series of case studies of exemplary hospices around the world planning and design concepts for palliative care environments. Case study projects are from Japan, Canada, Europe, Africa, Australia, Indonesia, China, the United States and South America. Thirty-six case studies are individually presented and comparatively analysed, and prognostications for the future of hospice architecture are examined. Each case includes floor plans, technical drawings and beautiful, full colour illustrations. Through an in-depth discussion of the inner profundities of hospice architecture, the book presents this type as a humane, genuine expression of the spiritual, physical and psychosocial dimensions of the contemporary death and dying movement. Written with a broad audience in mind, the book provides both technical and conceptual information, blending narrative, images and diagrammatic so that the audience may understand and articulate the complexities of this specialized building type in professional practice contexts.

An illustrated guide to the monumental and non-monumental final resting places of famous architects from Aalto Alvar to Frank Lloyd Wright. All working architects leave behind a string of monuments to themselves in the form of buildings they have designed. But what about the final spaces that architects themselves will occupy? Are architects' gravesites more monumental—more architectural—than others? This unique book provides an illustrated guide to more than 200 gravesites of famous architects, almost all of them in the United States. Led by our intrepid author, Henry Kuehn, we find that most graves of architects are not monumental but rather modest, that many architects did not design their final resting places, and that a surprising number had their ashes scattered. Architects' Gravesites offers an alphabetical listing, from Alvar Aalto and Dankmar Adler (Louis Sullivan's partner) to Frank Lloyd Wright and Minoru Yamasaki (designer of the World Trade Center's twin towers). Each entry includes a brief note on the architect's career and a color photograph of the site. For example, Ludwig Mies van der Rohe is buried in Chicago under a simple granite slab designed by his architect grandson; Louise Bethune, the first American woman to become a professional architect, is buried under a headstone inscribed only with her husband's name (a plaque honoring her achievements was installed later); Philip Johnson's ashes were spread in his rose garden, with no marker, across the street from his famous Glass House; and the grave of Pierre L'Enfant in Arlington National Cemetery offers a breathtaking view of Washington, D.C., the city he designed. Architects' Gravesites is an architectural guide like no other, revealing as much about mortality as about monumentality.
