With cryptocurrencies on the rise, start-up companies increasingly pursue a novel path to raise capital: the Initial Coin Offering ("ICO"). The frequent notion that ICOs are unregulated is misleading.

Could we understand, in biological terms, the unique and fantastic capabilities of the human brain to both create and enjoy art? In the past decade neuroscience has made a huge leap in developing experimental techniques as well as theoretical frameworks for studying emergent properties following the activity of large neuronal networks. These methods, including MEG, fMRI, sophisticated data analysis approaches and behavioral methods, are increasingly being used in many labs worldwide, with the goal to explore brain mechanisms corresponding to the artistic experience. The 37 articles composing this unique Frontiers Research Topic bring together experimental and theoretical research, linking state-of-the-art knowledge about the brain with the phenomena of Art. It covers a broad scope of topics, contributed by world-renowned experts in vision, audition, somato-sensation, movement, and cinema. Importantly, as we felt that a dialog among artists and scientists is essential and fruitful, we invited a few artists to contribute their insights, as well as their art. Joan Miró said that "art is the search for the alphabet of the mind." This volume reflects the state of the art search to understand neurobiological alphabet of the Arts. We hope that the wide range of articles in this volume will be highly attractive to brain researchers, artists and the community at large.

The Tenth Edition of Securities Regulation: Cases and Materials encompasses the sea changes that have recently occurred in the securities laws and capital markets, brought about by both SEC rulemaking and shifts in underwriting practices. The casebook carries forward its long-held standard of providing students with an in-depth, sophisticated, practical look at contemporary securities law. As it has since its first edition, this volume contains a highly teachable mix of problems, cases, and textual material, encouraging students to build their knowledge base by being active problem-solvers. Always forward-thinking, stressing current developments and controversies, the book is also highly modular, so that professors can easily pick and choose how to structure their courses without being locked into any given progression. New to the Tenth Edition: Developments involving cryptocurrencies and coin offerings Commentary on market developments such as issues arising with the retailization of trading markets The SEC's procedures for direct listings and the regulatory issues surrounding the explosion of SPACs The sweeping November 2020 reforms to the issuer transaction exemptions from registration, and the new standards for evaluating whether offerings will be integrated The Supreme Court's most recent Goldman Sachs decision addressing fraud on the market Coverage of several developments affecting the SEC's enforcement powers The SEC's new rules for proxy advisory services and shareholder proposals Where the law stands today regarding the obligations of broker-dealers in the wake of Regulation Best Interest Professors and students will benefit from: The book's highly modular organization, enabling different teaching formats and coverage Extensive use of problems that build student awareness of the fundamentals, with directions in the Teacher's Manual on how best to teach them Concise notes that introduce the reader to both theory and real-life practice issues A book that is always up-to-date and on the cutting edge

A Critical Appraisal of Initial Coin Offerings: Lifting the "Digital Token's Veil" examines the merits of regulating initial coin offerings under traditional securities regulations and provides an in-depth analysis of digital tokens as a new asset class.

The monograph's subject matter centres on cryptocurrencies, an instrument which aspires to be a modern form of money, and on its place in the world economy, payments systems and financial markets. Special attention is paid to the principles of their usage in Initial Coin Offerings (ICOs), one of the most important areas of their application. The aim of the work is the identification of the economic essence of cryptocurrencies. This includes their functions in settlement systems and as financial instruments, an indication of their role in crowdfunding, as well as the characterisation of the mechanism of the ICO and its core rules. The ICO market is becoming more and more popular among investors and companies seeking to increase or raise capital. The analysis of the cases included in the book shows the importance of a well-prepared white paper, the primary document which contains all the information linked with the project.

The great and fastening strides of the Fintech revolution continuously transform once-static traditional financial industry and provision of credit in particular. Blockchain innovation has led to creation of new industry of raising funds without the need for financial intermediaries such as venture capital or banks. In this book we build up a holistic picture of the token sales or initial coin offerings (ICOs) from their inception in 2013 to our days. We analyze the initial phases of the industry's development, collecting information on all campaigns or ICO attempts in this period, providing a thorough quantitative analysis of the phenomenon. We also provide a detailed account of token sales mechanics and overview all the main actors in this new ecosystem of blockchain-based financing. By leveraging the open data on token sales contributions, we study the behavior of token sales investors and find out that recurrent investors do not succeed in selecting better ICO projects but bigger investors do. In the last part of the book, we study crypto tokens as investments and overview their functionality and risks involved, as well as look at the alternative methods of creating and distributing tokens and compare them to token sales.

The growth of Blockchain technology presents a number of legal questions for lawyers, regulators and industry participants alike. Primarily, regulators must allow Blockchain technology to develop whilst also ensuring it is not being abused. This book addresses the challenges posed by various applications of Blockchain technology, such as cryptocurrencies, smart contracts and initial coin offerings, across different fields of law. Contributors explore whether the problems posed by Blockchain and its applications can be addressed within the present legal system or whether significant rethinking is required.

This book seeks to approach arts organizations in India and abroad from a management perspective, against the backdrop of COVID-19 and in the light of the advances made by digital technologies such as blockchains. It follows a case-based approach by taking a closer look at eight arts organizations drawn from USA, Canada, Japan, India, and Russia. A special chapter is devoted to the cultural and arts policies of India, USA, Japan, Canada, and Russia. The chapter on economics seeks to apply the principles of managerial economics to arts organisations. Also discussed is a methodological approach for classifying arts organizations in terms of their organizational processes. The book can be of immense utility to both serving and prospective managers of arts organizations.
