I love this book, I also have Atlas of Adventures which is brilliant and has gone down a storm with every child and adult I've shown it to. The latest in the Atlas series is just as gorgeous as the first, and I love the characters and scenarios the illustrator has brought to life on each page, my favourite being the flirty tiger and the walrus and his woolly hat.

This stunning new atlas is your first-class pass on a world tour of the homes of Earth's most incredible animals. The latest exciting title in DK's popular Where on Earth? series maps out the habitats of the world's mammals, fish, birds, reptiles, invertebrates, and more. Whether it's plotting the range of a lion, following the flight paths of birds, tracking great white sharks in the oceans, or exploring the migration of the monarch butterfly, you will see exactly where and how more than 100 extraordinary animal species live. What makes Where on Earth? Animals unique are the maps themselves. Each one is individually commissioned in 3-D, with detail to show the habitat of each animal, as well as its geographic location. This reveals an astonishing amount of information about the behavior of these animals, from how seals are adapted to survive in freezing Antarctic seas to how beetles survive in the heat of the Sahara desert. There is also a focus on the conservation and protection of animals. Maps reveal the shrinking territories of some species, showing where they used to roam in the past compared to what's left of their range today. Whichever animal you're trying to track down, you're sure to find it in Where on Earth? Animals.
