Hospital Preparation for Bioterror provides an extremely timely guide to improving the readiness of hospitals or healthcare organizations to manage mass casualties as a result of bioterrorism, biological warfare, and natural disasters. Contributions from leading law enforcement agencies, hospital administrators, clinical engineers, surgeons and terror-prevention professionals provide the most comprehensive, well-rounded source for this valuable information. Chapters on logistics and protecting the infrastructure help personnel distinguish the specific risks and vulnerabilities of each unique institution and assists in identifying specific solutions for disaster and bioterrorism preparedness. Principles and techniques discussed are applicable to all disasters, both large and small, not just bioterrorism. Technical aspects such as hospital power and telecommunications are covered, in addition to patient care, response to mass casualties, large-scale drills, and surge capacity. Organized along functional lines, patient flow, medical specialty, and infrastructure. A complimentary website with supplementary materials, check-lists, and references enhances the text and provides additional resources for preparedness.

The FRCS (Tr+Orth) exam is a serious challenge for Orthopaedic Specialist Registrars and represents one of the final hurdles on the path to becoming a Consultant Orthopaedic Surgeon. Trauma for the FRCS (Tr+Orth) Examination is a dedicated revision resource for trauma that provides candidates with high quality self-assessment in order to maximise exam success. Written by expert consultants and senior trainees/fellows, this book features over 100 Single Best Answer Questions, over 70 Extended Matching Questions, and 70 Vivas specialising in trauma. Each answer contains an up to date explanation, and helpful sources for further reading to ensure quick identification of key areas you need to focus on more thoroughly. This revision resource is ideal for preparing you for the trauma questions within this challenging exam.

This practical question and answer book covers topics within the field of neurocritical care, including aspects of neurology, neurosurgery, general critical care, and emergency medicine. Each chapter serves as a standalone test, comprised of approximately 100 questions, and closely mimics the tone and scope of the United Council for Neurologic Subspecialties (UCNS) certification exam in neurocritical care. Rationale and discussion are provided in the answers section at the end of each exam. This practical study guide will help prepare critical care fellows and residents from a variety of backgrounds (including internal medicine, neurology, anesthesiology, and emergency medicine) for the UCNS exam.

Injury is an increasingly significant health problem throughout the world, accounting for 16 per cent of the global burden of disease. The public health burden of death and disability from injury is particularly notable in low and middle income countries. These guidelines seek to establish practical and affordable standards applicable to injury or trauma care worldwide, whether in rural health posts, small hospitals, hospitals staffed by specialists or tertiary care centres. It sets out a list of key trauma treatment services designed to be achievable in all settings, and defines the various human and physical resources required. It also includes a number of recommendations for methods to promote such standards including training, performance improvement, trauma team organisation and hospital inspection.

Historically in warfare, the majority of all combat deaths have occurred prior to a casualty ever receiving advanced trauma management. The execution of the Ranger mission profile in the Global War on Terrorism and our legacy tasks undoubtedly will increase the number of lethal wounds. Ranger leaders can significantly reduce the number of Rangers who die of wounds sustained in combat by simply targeting optimal medical capability in close proximity to the point of wounding. Directing casualty response management and evacuation is a Ranger leader task; ensuring technical medical competence is a Ranger Medic task. A solid foundation has been built for Ranger leaders and medics to be successful in managing casualties in a combat environment. The true success of the Ranger Medical Team will be defined by its ability to complete the mission and greatly reduce preventable combat death. Rangers value honor and reputation more than their lives, and as such will attempt to lay down their own lives in defense of their comrades. The Ranger Medic will do no less.

This international bestseller covers the full advanced paediatric life support course, with the core sections for the abbreviated one-day course clearly picked out. The book provides practical guidance for managing children and infants in the first life-threatening "golden" hour. This new edition goes beyond immediate management to include stabilisation and transfer.
