whilst also denying mobility to the enemy.

Defence Jobs Australia - Combat Engineer

The Royal Australian Engineers is the Military engineering corps of the Australian Army. The RAE is ranked fourth in seniority of the corps of the Australian Army, behind the Staff Cadets, Armoured and Artillery Corps. The corps was formed by the amalgamation of the various colonial engineer corps of the states and territories of Australia in 1902 and since then has served in various conflicts including World War I, World War II and the Vietnam War. The corps has also served on numerous peacekee

Army Combat Engineers Q&A Route Clearance - YouTube

Geomatics (surveying and cartography) is another area of military engineering but is often performed by the combat engineers of some nations and in other cases is a separate responsibility, as was formerly the case in the Australian Army. While the officers of a combat engineer unit may be professionally certified civil or mechanical engineers, the non-commissioned members are generally not.

Combat Engineer | Defence Careers

The RAE provides combat engineering, construction and other technical support to the Australian Defence Force. One of the main roles of the Corps is to provide mobility and counter mobility capabilities to the Australian Army and its allies. This means enhancing the ability of friendly forces to move while denying movement to enemy forces.

The military history of Australia's

Access Free Australian Army Combat Engineers

Corps of Army Engineers during World War One. These soldiers were hardly ever mentioned in official histories of that war and yet they served at the very front of the fighting and were involved in some of the most spectacular military events of The Great War.

From Afghanistan to gold -- an extraordinary tale of tragedy, resilience and triumph In 2012, Combat Engineer Curtis McGrath was serving in the Australian Army in Afghanistan when, in the line of duty, he stepped on a land mine. Seriously injured but still conscious and aware he'd bleed out and die within minutes, Curtis, as the unit's chief first-aid officer, directed his comrades to apply tourniquets and administer an IV and morphine. Then, as he was stretchered to a helicopter,

Access Free Australian Army Combat Engineers

fearing he would never see his family again, he joked that he planned to become a Paralympian. Just months later, Curtis was up and walking on prosthetic legs, motivated by the opportunity to march with his unit in their welcome-home ceremony.

Kayaking gave him a new sense of purpose and, in 2013, he and his father, Paul, paddled more than 700 kilometres from Sydney to Brisbane to raise funds for Mates4Mates, which supports current and former Defence Force members. A year later, Curtis captained the Australian team at the inaugural Invictus Games in London, founded by Prince Harry for wounded, injured or ill veterans. Then, within four years of his injury, Curtis won gold at the Rio 2016 Paralympic Games. Now a ten-time world champion gold medallist, Curtis recently stormed to

Access Free Australian Army Combat Engineers

victory at the Tokyo Paralympics to bring home two more Paralympic gold medals for Australia. Passionate about the power of sport to transform lives, he's ready at last to share his extraordinary story, and how he has approached every setback and challenge with courage, resilience, humour and grit.

Presents professional information designed to keep Army engineers informed of current and emerging developments within their areas of expertise for the purpose of enhancing their professional development. Articles cover engineer training, doctrine, operations, strategy, equipment, history, and other areas of interest to the engineering community.

Ian Mansfield was serving in the

Access Free Australian Army Combat Engineers

Australian Army when he was selected to command a team of Australian combat engineers to go to Pakistan to train Afghan refugees in mine-clearance procedures. With millions of refugees expected to return to Afghanistan, the United Nations saw a humanitarian crisis looming and requested help from Western countries to tackle the landmine problem. In September 1991, Ian, along with his wife and two young children, left Australia on a one-year assignment ... and didn't return home for 20 years. This highly personal account recalls Ian's pioneering efforts to set up a civilian program in Afghanistan to clear landmines for humanitarian purposes, and then his decision to leave the Australian Army and join the United Nations. He continued to work in the mine-action sector, setting up

Access Free Australian Army Combat Engineers

programs in Laos and Bosnia, and then working at the policy level at the United Nations headquarters in New York. Stepping into a Minefield highlights the dangers and the tragedies involved in landmine clearance, but also reveals the great humanity, dedication and humour of the thousands of brave men and women clearing landmines today. It also outlines the political, cultural and security 'minefields' that Ian had to navigate along the way, which were often more difficult to deal with than the real minefields.

Access Free Australian Army Combat Engineers

We make and we break. They were the forward scouts, the mine clearers, the bridge builders, and the tunnel rats. They were frequently not just on the front line, but right at the sharp end of the action. They were the legendary Aussie Sappers, the army engineers, who were literally everywhere in the fighting against the Vietcong. This special breed of soldier lived hard and played hard. They were there at the beginning of the war; they were also among the last to leave. And along the way, they fought with their mates in the infantry and in the tanks to bear the brunt of the Vietcong's revenge. To the rest of the world, Vietnam was a conflict of ideologies. On the ground it was a battle of wits and the sappers were at the forefront. This is their

Access Free Australian Army Combat Engineers story.

The Australian Army from Whitlam to Howard is the first critical examination of Australia's post-Vietnam military operations, spanning the 35 years between the election of Gough Whitlam and the defeat of John Howard. John Blaxland explores the 'casualty cringe' felt by political leaders following the war and how this impacted subsequent operations. He contends that the Australian Army's rehabilitation involved common individual and collective training and reaffirmation of the Army's regimental and corps identities. He shows how the Army regained its confidence to play leading roles in East Timor, Bougainville and the Solomon Islands, and to contribute to combat operations further afield. At a time when the

Access Free Australian Army Combat Engineers

Australian Army's future strategic role is the subject of much debate, and as the 'Asian Century' gathers pace and commitment in Afghanistan draws to an end, this work is essential reading for anyone interested in understanding the modern context of Australia's military land force.
