Geoffrey Berg, a graduate of Cambridge University, England, believes the case for atheism has never been put in as forceful and logically cogent a way as it merits, least of all by the great philosophers. In this book he sets out to remedy that by strengthening some traditional atheistic arguments and by initiating some new logical arguments for atheism. Geoffrey Berg develops six simple completely logical arguments in clear language that practically everybody can understand in a way that has never been done before to prove that belief in God is not merely unsupported by Logic but is actually contrary to Logic. This is a groundbreaking book because it is probably the first attempt by a single author that devotes an entire book to absolutely disproving the existence of God, all the time matching verbal arguments with strictly logical formulations of the argument. It aims to crystallize the case for atheism in a way that has not been done before. It is likely in retrospect to be seen as a landmark book because some of the novel arguments in this book are likely to be used hereafter by people around the world.

The cult of saints was one of the most important aspects of life in the Middle Ages, and it often formed the nucleus of developing group identities in a town, a province or a country. The literature of Anglo-Saxon England is unique among contemporary European literatures in that it features a vast amount of saints' Lives in the vernacular. Of these Lives, Ælfric is the most important author, and his saints' Lives have never previously been explored in their contemporary setting. In this study, Gretsch analyses Ælfric's Lives of five important saints in the light of their cults in Anglo-Saxon England. This gives the reader fascinating glimpses of Ælfric at work: he adapts the cults and rewrites the received Latin hagiography of the five saints, with the result that each of their English Lives conveys a distinct message to the contemporary political elite and to a lay audience at large.
