Example of static electricity: When a balloon is rubbed against a woolly jumper, electrons move from the sweater to the balloon. The balloon now has more – s than + s, so it now has a negative charge. The sweater loses some negative charges and so becomes positively charged. Like charges (e.g. two positives or two negatives) repel each other.

"The best magic is that which involves absolutely no sleight-of-hand, only the unexpected yet natural workings of nature. Physics, Fun, and Beyond is chock full of just this kind of magic—simple yet fascinating experiments, easy to follow and colorful drawings, and fun facts. Simply wonderful!" —Roald Hoffmann, 1981 Nobel Prize Laureate in Chemistry Pure Fun, Pure Excitement: You've Never Learned Physics Like This Before! Physics is pure excitement: nothing's more fun than discovering how the world works and exploring its many possibilities! With Physics, Fun, and Beyond, you'll grab the universe in your own two hands as you build more than 110 projects that uncover the physics beneath everyday life! Most of these projects are amazingly easy to build: all you'll need are your everyday household tools and cheap (sometimes even free) materials. From wind tunnels to flying saucers, you'll learn exactly how to safely build these experiments, why they work, and what they mean. Learn about all this, and more: Step on eggs without breaking them...and understand the principles of material strength Build the "Magic Can" that teaches you about the different kinds of energy Discover why the Earth isn't exactly round Learn more about gravity, with the "Astronaut in the Elevator" experiment Use pendulums to visualize radio/TV frequencies and broadcasting Feel pressure by sitting on a bed of nails Build hydraulic robots to discover how you can transmit and amplify forces Construct wings and wind tunnels that show why airplanes fly Learn about optics by making bottles invisible Recreate the sun and sky to realize why the sky is blue Demonstrate the "greenhouse effect" with a homemade solar heater Get water to climb walls—as you understand cohesion and adhesion Build "wireless phones" that capture sound and make acoustics fun Create simple motors that display the basics of electromagnetism Physics, Fun, and Beyond is for kids, teenagers, teachers, parents, homeschoolers...everyone from 10 to 100 with curiosity and a passion for discovery and new challenges! © Copyright Pearson Education. ?This book examines the implementation of inquiry-based approaches in science teaching and learning. It explores the ways that those approaches could be promoted across various contexts in Europe through initial teacher preparation, induction programmes and professional development activities. It illustrates connections between scientific knowledge deriving from the science education research community, teaching practices deriving from the science teachers' community, and educational innovation. Inquiry-Based Science Teaching and Learning (IBSTL) has been promoted as a policy response to pressing educational challenges, including disengagement from science learning and the need for citizens to be in a position to evaluate evidence on pressing socio-scientific issues. Effective IBSTL requires well-prepared and skilful teachers, who can act as facilitators of student learning and who are able to adapt inquiry-based activity sequences to their everyday teaching practice. Teachers also need to engage creatively with the process of nurturing student abilities and to acquire new assessment competences. The task of preparing teachers for IBSTL is a challenging one. This book is a resource for the implementation of inquiry-oriented approaches in science education and illustrates ways of promoting IBSTL through initial teacher preparation, induction and professional development programmes.
