BERNINA Activa 130. The Bernina Activa 130 is a popular and in many ways classic Bernina sewing machine. Historically, the Bernina line has proudly used an oscillating hook system known as the CB Hook. In an oscillating hook system, the hook is set to the left of the needle and moves from left to right behind the needle picking up the thread loop. It draws the upper thread around the bobbin case containing the bobbin wrapping the upper thread around the lower thread.

Bernina Activa 130/140 info. The Bernina 130 & 140 were introduced in 1998. There's not a ton of info online anymore, so here's a bit for anyone who might see a deal on one. It's not a machine I would've gone for on paper - not as many stitches or features as my previous machine - but I love the adjustable presser foot pressure, the straightforward interface, and the sense of control, all at a more affordable price than many used Berninas, both older and newer.

Bernina Sewing Machine Handwheel Stuck. This can be a common problem among different Bernina machines. It seems to be consistent with the 530, 730, 830 and 930 models and there may be two causes for it taking place. First, one or both white plastic gears are broken and to get these fixed, you do have to go to the Bernina repair service.

Tips and tricks that make appliqu\u00e9 totally trouble-free...even for first-timers.

This operational handbook introduces the basic skills necessary for acquiring a parachute rigger certificate. It is developed by the Flight Standards Service, Airman Testing Standards Branch, in cooperation with various aviation educators and industry. This handbook is primarily intended to assist individuals who are preparing for the parachute rigger airman knowledge test and the oral and practical test. The material presented in this handbook is appropriate for senior and master parachute riggers. The handbook contains information on regulations and human factors, design and construction, materials, operations, inspection and packing, hand tools, sewing machines, the parachute loft, repairs, alterations, and manufacture. This handbook conforms to training and certification concepts established by the Federal Aviation Administration (FAA). There are different ways of teaching, as well as performing specific rigging procedures, and many variations in the explanations of repairs, alterations, and manufacture of parachutes. The discussion and explanations reflect commonly used practices and principles. This handbook provides a basic knowledge that can serve as a foundation on which to build further knowledge. Occasionally the word "must" or similar language is used where the desired action is deemed critical. The use of such language is not intended to add to, interpret, or relieve a duty imposed by Title 14 of the Code of Federal Regulations (14 CFR). It is essential for persons using this handbook to also become familiar with and apply the pertinent parts of 14 CFR and appropriate technical standards.

Long and skinny or short and wide, modern and minimal or traditional and scrappy, the 56 toppers in this book fit any table. This collection features patterns by today's favorite designers. Styled photography offers a colorful preview of how the quick-to-stitch projects look on tabletops and shows creative ways to include the designs in your home decor Seasonal and holiday-themed projects are ideal for gift giving and year-round stitching Double the variety with two comprehensive sections: traditional, long table runners and diversely shaped table toppers

This brilliant vignette of seventeenth-century Rome, its Baroque architecture, and its relationship to the Catholic Church brings to life the friendship between a genius and his patron with an ease of writing that is rare in art history. By 1650, the spiritual and political power of the Catholic Church was shattered. Thanks to the twin blows of the Protestant Reformation and the Thirty Years War, Rome-celebrated both as the Eternal City and Caput Mundi (the head of the world)-had lost its preeminent place in Europe. Then a new Pope, Alexander VII, fired with religious zeal, political guile, and a mania for creating new architecture, determined to restore the prestige of his church by making Rome the key destination for Europe's intellectual, political, and cultural elite. To help him do so, he enlisted the talents of Gianlorenzo Bernini, already celebrated as the most important living artist-no mean feat in the age of Rubens, Rembrandt, and Velazquez.

"University Physics for the Life Sciences has been written in response to the growing call for an introductory physics course explicitly designed for the needs and interests of life science students anticipating a career in biology, medicine, or a health-related field"--

Pucker or Puckering is the most used (abused?) term in the garment manufacturing industry. Pick up any quality controllers report, and the first thing that will strike your eye will be "...Puckering in armhole, ...Puckering in neckline binding, ...control Puckering in bottom hem..." the list is endless. Buying office quality controllers are as enamoured of this term as much as manufacturers abhor it. What is it that makes it so distasteful? Why does it occur? How can it be controlled? While there are numerous leaflets, documents and articles available on pucker, we have found that the majority of them lay great stress on "inherent pucker" (only material parameters). In this booklet have tried to include process parameters as well as sewing of lightweight fabrics. All said and done, the problem is so intricately interdependent that exhaustive compilation is well nigh impossible. We are sure this booklet will help manufacturers to understand the rationale behind this publication and we will consider our effort successful if enthusiastic readers regularly inform us about newer methods to tackle the problem.
