Russia will accept bitcoin as payment for its oil and natural gas from friendly countries, its head of the energy committee said Thursday. Today's doodle in Mexico is dedicated to Emma Godoy. Who ...

The basic text for Alcoholics Anonymous.

For more than forty years, animal health professionals have turned to the Merck Veterinary Manual for integrated, concise and reliable veterinary information. Now this manual covering the diagnosis, treatment, and prevention of diseases of companion, food and zoo animals is available on an easy-to-use, fully searchable CD-ROM. The CD includes the full text of The Merck Veterinary Manual 8/e and has been enhanced with picture links featuring original anatomical artwork and numerous clinical and diagnostic illustrations, table links and quick search links that provide quick access to cross referenced text.

The first book to use the unexpected discoveries of neuroscience to help us make the best decisions Since Plato, philosophers have described the decision-making process as either rational or emotional: we carefully deliberate, or we “ blink ” and go with our gut. But as scientists break open the mind ’ s black box with the latest tools of neuroscience, they ’ re discovering that this is not how the mind works. Our best decisions are a finely tuned blend of both feeling and reason—and the precise mix depends on the situation. When buying a house, for example, it ’ s best to let our unconscious mull over the many variables. But when we ’ re picking a stock, intuition often leads us astray. The trick is to determine when to use the different parts of the brain, and to do this, we need to think harder (and smarter) about how we think. Jonah Lehrer arms us with the tools we need, drawing on cutting-edge research as well as the real-world experiences of a wide range of “ deciders ” —from airplane pilots and hedge fund investors to serial killers and poker players. Lehrer shows how people are taking advantage of the new science to make better television shows, win more football games, and improve military intelligence. His goal is to answer two questions that are of interest to just about anyone, from CEOs to firefighters: How does the human mind make decisions? And how can we make those decisions better?

Nineteen Eighty-Four (1949) was George Orwell's final novel and was completed in difficult conditions shortly before his early death. It is one of the most influential and widely-read novels of the post-war period.

Understanding the nature of consciousness is the key to understanding the whole of reality. It is not that mind has emerged from matter but rather that consciousness and matter are dual aspects of a much greater reality. Beyond the simplistic notion of duality that is so

entrenched in Western philosophies, there is a deeper and more profound way to comprehend the nature of our existence. We are parts within a wider whole. We do not exist as separate beings within the Universe, we are parts of the Universe itself. The theory outlined in Consciousness and Evolution turns orthodox explanations for the evolution of mind upside down. It is not matter that has created consciousness but rather it is consciousness that has moulded matter and created intelligent beings like ourselves. In order to understand why we are here, and to live our lives as fully as we might, we must seek to address the issue at the very core of our being: the existence of mind itself.

What determines whether complex life will arise on a planet, or even any life at all? Questions such as these are investigated in this groundbreaking book. In doing so, the authors synthesize information from astronomy, biology, and paleontology, and apply it to what we know about the rise of life on Earth and to what could possibly happen elsewhere in the universe. Everyone who has been thrilled by the recent discoveries of extrasolar planets and the indications of life on Mars and the Jovian moon Europa will be fascinated by Rare Earth, and its implications for those who look to the heavens for companionship.
