The Definitive, Fully Updated Guide to Solving Real-World Chemical Reaction Engineering Problems For decades, H. Scott Fogler's Elements of Chemical Reaction Engineering has been the world's dominant text for courses in chemical reaction engineering. Now, Fogler has created a new, completely updated fifth edition of his internationally respected book. The result is a refined book that contains new examples and problems, as well as an updated companion Web site. More than ever, Fogler has successfully integrated text, visuals, and computer simulations to help both undergraduate and graduate students master all of the field's fundamentals. As always, he links theory to practice through many relevant examples, ranging from standard isothermal and non-isothermal reactor design to applications, such as solar energy, blood clotting, and drug delivery, and computer chip manufacturing. To promote the transfer of key skills to real-life settings, Fogler presents the following three styles of problems: 1. Straightforward problems that reinforce the principles of chemical reaction engineering 2. Living Example Problems (LEPs) that allow students to rapidly explore the issues and look for optimal solutions 3. Open-ended problems that encourage students to practice creative problem-solving skills ABOUT THE WEB SITE The companion Web site offers extensive enrichment opportunities and additional content, including Complete PowerPoint slides for lecture notes for chemical reaction engineering classes. Links to additional software, including POLYMATH(tm), Matlab(tm), Wolfram Mathematica(tm), AspenTech(tm), and COMSOL(tm). Interactive learning resources linked to each chapter, including Learning Objectives, Summary Notes, Web Modules, Interactive Computer Games, Solved Problems, FAQs, additional homework problems, and links to Learncheme. Living Example Problems that provide more than eighty interactive simulations, allowing students to explore the examples and ask "what-if" questions. The LEPs are unique to this book. Professional Reference Shelf, which includes advanced content on reactors, weighted least squares, experimental planning, laboratory reactors, pharmacokinetics, wire gauze reactors, trickle bed reactors, fluidized bed reactors, CVD boat reactors, detailed explanations of key derivations, and more. Problem-solving strategies and insights on creative and critical thinking.

Humble beans are the true MVPs of the kitchen. They have a long shelf life, are packed with protein, and best of all, they taste great in a wide variety of applications. This collection of 20 foolproof recipes gives beans their due, putting them center stage in recipes such as Ultracreamy Hummus (you've never had homemade hummus this velvety-smooth) and White Bean and Tuna Salad (two pantry-friendly ingredients come together for a dish that's greater than the sum of its parts). We share the secrets to making light and crispy Falafel as well as irresistible soups and sides. Whether you're looking for breakfast inspiration (our recipe for Scrambled Eggs with Pinto Beans and Cotija Cheese delivers tender

eggs with a mildly spicy kick), internationally inspired mains such as Palak Dal (Spinach Dal with Cumin and Mustard Seeds) and Tuscan Shrimp and Beans, or hearty vegetarian dishes such as Black Bean Burgers and Meatless "Meat" Sauce with Chickpeas and Mushrooms, this collection gives you 20 great reasons to put beans on the menu.

A case-based, step-by-step approach to learning how to use Microsoft Office XP.

We all value freedom, family, friends, work, education, health, and leisure—"the best things in life." But the pressure we experience to chase the dollar in order to satisfy both the demands of the bottom line and the demands of our seemingly insatiable desire to consume are eroding these best things in life. Our children now value profit centers, not sports heroes. Our educational system is fast becoming nothing more than a financial investment where students are encouraged to expend more energy on making the grade than on learning about their world. Our business leaders are turning young idealists into cynics when they cut corners and explain that "everybody's doing it." The need to achieve in our careers intrudes so greatly on our personal world that we find ourselves weighing the "costs" of enjoying friendships rather than working. In this book, psychologist Barry Schwartz unravels how market freedom has insidiously expanded its reach into domains where it does not belong. He shows how this trend developed from a misguided application of the American value of individuality and self-pursuit, and how it was aided by our turning away from the basic social institutions that once offered traditional community values. These developments have left us within an overall framework for living where worth is measured entirely by usefulness in the marketplace. The more we allow market considerations to guide our lives, the more we will continue to incur the real costs of living, among them disappointment and loneliness.

We all value freedom, family, friends, work, education, health, and leisure—"the best things in life." But the pressure we experience to chase the dollar in order to satisfy both the demands of the bottom line and the demands of our seemingly insatiable desire to consume are eroding these best things in life. Our children now value profit centers, not sports heroes. Potters everywhere will welcome "Copper Red Glazes", the ultimate reference for this tricky but stunning glaze. Finally potters can master ancient secrets without expensive and frustrating experimentation. 50 color photos.

This book traces the lifestory of Rechungpa (1084-1161) - the student of the famous teacher Milarepa - using rare and little-known manuscripts, and discovers how the image of both Milarepa and Rechungpa underwent fundamental transformations over a period of over three centuries. Peter Alan Roberts compares significant episodes in the life of Rechungpa as portrayed in a succession of texts, and thus demonstrates the evolution of Rechungpa's biography. This is the first survey of the surviving literature which includes a detailed analysis of their dates, authorship and interrelationships. It shows how Rechungpa was increasingly portrayed as a rebellious, volatile and difficult pupil, as a lineage from a

fellow-pupil prospered to become dominant in Tibet. Written in a style that makes it accessible to broad readership, Roberts' book will be of great value to anyone with an interest in the fields of Tibetan literature, history or religion.

Catalytic Reactors presents several key aspects of reactor design in Chemical and Process Engineering. Starting with the fundamental science across a broad interdisciplinary field, this graduate level textbook offers a concise overview on reactor and process design for students, scientists and practitioners new to the field. This book aims to collate into a comprehensive and well-informed work of leading researchers from north America, western Europe and south-east Asia. The editor and international experts discuss state-of-the-art applications of multifunctional reactors, biocatalytic membrane reactors, micro-flow reactors, industrial catalytic reactors, micro trickle bed reactors and multiphase catalytic reactors. The use of catalytic reactor technology is essential for the economic viability of the chemical manufacturing industry. The importance of Chemical and Process Engineering and efficient design of reactors are another focus of the book. Especially the combination of advantages from both catalysis and chemical reaction technology for optimization and intensification as essential factors in the future development of reactors and processes are discussed. Furthermore, options that can drastically influence reaction processes, e.g. choice of catalysts, alternative reaction pathways, mass and heat transfer effects, flow regimes and inherent design of catalytic reactors are reviewed in detail. Focuses on the state-of-the-art applications of catalytic reactors and optimization in the design and operation of industrial catalytic reactors Insights into transfer of knowledge from laboratory science to industry For students and researchers in Chemical and Mechanical Engineering, Chemistry, Industrial Catalysis and practising Engineers

Alongside presenting the fundamentals, this book reviews the state of the art of mathematical modeling and control of bioprocesses, while demonstrating the application in various biological systems important to industry. At the same time, the application of different types of models and control strategies are illustrated, taking into account the recent developments in reactor modeling. In addition to modeling and control, the metabolic flux analysis and the metabolic design and their application to bioprocesses are considered.

In this first-ever coloring book from American Vogue, you are invited into a world of fashion fantasy. Twenty-six archival magazine covers from 1912 to 1932, by ten celebrated illustrators living here and abroad, take you back to a more playful and whimsical moment of boas, bows, hats and headpieces, fans, pearls and gloves, and even exotic animals. Coloring book fans of all ages can try their hand at the Art Deco patterns and letters from A to Z and the lively drawings of women dressed for the task at hand, whether it is driving their own car, pruning morning glories in the garden, feeding a dragon, steering a gondola, sitting on a crescent moon, perched on a peacock or riding a zebra--side-saddle, of course. This is the Vogue woman as liberated, stylish, and always dressed for adventure. At the back, don't miss the twenty-six Vogue covers in their original colors with lively captions as well as a stunning six-page gatefold of twenty-one glamorous dresses from 1912-1932 to color, tear out, and display.
