Is nature all there is? John Haught examines this question and in doing so addresses a fundamental issue in the dialogue of science with religion. The belief that nature is all there is and that no overall purpose exists in the universe is known broadly as 'naturalism'. Naturalism, in this context, denies the existence of any realities distinct from the natural world and human culture. Since the rise of science in the modern world has had so much influence on naturalism's intellectual acceptance, the author focuses on 'scientific' naturalism and the way in which its defenders are now attempting to put a distance between contemporary thought and humanity's religious traditions. Haught seeks to provide a reasonable, scientifically informed alternative to naturalism. His approach will provide the basis for lively discussion among students, scholars, scientists, theologians and intellectually curious people in general.

Everyone warned Emma about Dean. Even his own family doesn't trust him, but Emma can't help falling in love with her best friend's brother, so when Dean breaks her heart, she knows she only has herself to blame. Eight years later Emma has a new man in her life, a single parent like herself. But when she accepts a job on Lord Howe Island, her past and Dean, catch up with her.

When allegations about his actress wife's infidelity are posted online, James, a screenwriter with a violent past, attacks his wife's lover, sparking a media frenzy that compels him to go into hiding and resort to extreme measures to protect his wife.

An introduction to linear time playing. The first section contains basic exercises for linear playing skills: voice coordination, dynamic balance, accenting, and more. The second section deals with the development of time feels in the linear style, including 4/4, half-time, shuffle, and odd meter feels.

An intimate, award winning story of immigrants and their families, the borders they cross, and the ties that bind us all together. Fourteen-year-old Clara Luna's name means "clear moon" in Spanish. But lately, her life has felt anything but clear. A letter has arrived from her grandparents in Mexico inviting her to stay with them for the summer. But Clara has never met her father's parents. All she knows is that he snuck over the border from Mexico as a teenager. When she arrives, she's stunned by how different her grandparents' life is from her own in the United States. They live in simple shacks in the mountains of southern Mexico, where most people speak not only Spanish, but an indigenous language, Mixteco. Their village of Yucuyoo holds other surprises, too—like the spirit waterfall, which is heard but never seen. And Pedro, a young goatherder who wants to help Clara find the waterfall. But as Clara discovers more about where she comes from, what will it mean for who she is now? What The Moon Saw is an enchanting story of family, home, and discovering your true self in the most unexpected place. "Filled with evocative language that is rich in imagery and nuance and speaks to the connections that bind us all. . . . a thrilling adventure. . . ."—Kirkus Reviews, Starred "Readers . . . will find themselves swept up in this powerful, magical story, and they ' ll feel, along with Clara, ' the spiderweb ' s threads, connecting me to people miles and years away ' ."—Booklist, Starred

Highlights of the book: Discussion about all the fields of Computer Aided Engineering, Finite Element Analysis Sharing of worldwide experience by more than 10 working professionals Emphasis on Practical usage and minimum mathematics Simple language, more than 1000 colour images International quality printing on specially imported paper Why this book has been written ... FEA is gaining popularity day by day & is a sought after dream career for mechanical engineers. Enthusiastic engineers and managers who want to refresh or update the knowledge on FEA are encountered with volume of published books. Often professionals realize that they are not in touch with theoretical concepts as being pre-requisite and find it too mathematical and Hi-Fi. Many a times these books just end up being decoration in their book shelves ... All the authors of this book are from IITs & IISc and after joining the industry realized gap between university education and the practical FEA. Over the years they learned it via interaction with experts from international community, sharing experience with each other and hard route of trial & error method. The basic aim of this book is to share the knowledge & practices used in the industry with experienced and in particular beginners so as to reduce the learning curve & avoid reinvention of the cycle. Emphasis is on simple language, practical usage, minimum mathematics & no pre-requisites. All basic concepts of engineering are included as & where it is required. It is hoped that this book would be helpful to beginners, experienced users, managers, group leaders and as additional reading material for university courses.

Provides an account of how, shortly before World War II, a heroic Naval officer named Swede Momsen led the efforts to save thirty-three men trapped in a sunken submarine.
