Business Law: Text and Cases in the Regulatory Environment 5th Custom Edition 2003 .

In the modern business world, no skill is more important than the ability to operate a business legally and ethically. Failure to meet the legal and ethical expectations of society and government can be disastrous for both firms and individuals in America's market-based economic system. The purpose of this text, which has been continually updated since its initial

publication more than thirty years ago, is to enable students to navigate the modern business world in which illegal or unethical actions have "bet the company" consequences. The book covers all major business law subject matter areas, including contract law, intellectual property law, employment law, tort law, securities law, and products liability law. Moreover, new chapters on business ethics will assist students in making the right decisions in a complex world.

Sports Law looks at major court cases, statutes, and regulations that explore a variety of legal issues in the sports industry. The early chapters provide an overview of sports law in general terms and explore its impact on race, politics, religion, and everyday affairs. Later chapters address hot button issues such as gender equity, drug testing, and discrimination. Written from a sport management perspective, rather than from a lawyer's, this text covers all the major areas presented in sports law today including: cases relating to torts, contracts, intellectual property, and agents. Factual scenarios throughout the text allow students to critically examine and apply sport management principles to legal issues facing the sports executive. This extensively revised, restructured, and updated edition continues to present an engaging and comprehensive introduction to the subject, exploring the world's landforms from a broad systems perspective. It covers the basics of Earth surface forms and processes, while reflecting on the latest developments in the field. Fundamentals of Geomorphology begins with a consideration of the nature of geomorphology, process and form, history, and geomorphic systems, and moves on to discuss: structure: structural landforms associated with plate

tectonics and those associated with volcanoes, impact craters, and folds, faults, and joints process and form: landforms resulting from, or influenced by, the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind, and the sea; landforms developed on limestone; and landscape evolution, a discussion of ancient landforms, including palaeosurfaces, stagnant landscape features, and evolutionary aspects of landscape change. This third edition has been fully updated to include a clearer initial explanation of the nature of geomorphology, of land surface process and form, and of land-surface change over different timescales. The text has been restructured to incorporate information on geomorphic materials and processes at more suitable points in the book. Finally, historical geomorphology has been integrated throughout the text to reflect the importance of history in all aspects of geomorphology. Fundamentals of Geomorphology provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology. Written in an accessible and lively manner, it includes guides to further reading, chapter summaries, and an extensive glossary of key terms. The book is also illustrated throughout with over 200 informative diagrams and attractive photographs, all in colour.
