Media philosopher Vilém Flusser proposed a revolutionary new way of thinking about photography. An analysis of the medium in terms of aesthetics, science and politics provided him with new ways of understanding both the cultural crises of the past and the new social forms nascent within them. Flusser showed how the transformation of textual into visual culture (from the linearity of history into the two-dimensionality of magic) and of industrial into post-industrial society (from work into leisure) went hand in hand, and how photography allows us to read and interpret these changes with particular clarity.

"This book is a must-have for marketers who need to use a composite set of tools to break through the attention economy.The book is also for the general public who might be concerned about the growing and numbing screen time that takes people away from doing other things." - PhilipKotleron Illusional Marketing. ... Digital platforms know how to "hook" consumers and keep them glued to the screen. These products were developed based on psychologists' research into the way the human brain works. These are new weapons in the marketing toolkit that will become even more effective when combined with near-future enhancements like augmented and virtual reality. As the children of Generation Z and its successor Generation Alpha meet the internet at life's earliest stages, the likelihood they will develop addictions to such devices seems very high. These illusional marketing techniques offer new weapons for commercial brands; their efficiency has been proven over and over. They give marketing managers powers to alter behavior and to turn inclinations into habits by manipulating the unconscious mind. At this point, marketing professionals need to take significant responsibilities because illusional marketing practices that do not serve a meaningful cause may bring about dangerous outcomes. A system that is only designed for the sake of making more money will serve the interest of no party in the long run, while using the tools of illusional marketing in a positive manner could serve humanity. In our current era, exposing these techniques along with their positive and negative aspects becomes a vital and highly significant task, one best fulfilled by academia.

*Key global players increasingly politicize discussion of climatic change. This is especially evident in regard to Bangladesh, much of which is perilously close to sea level and vulnerable to flooding, and which has long been the recipient of various development schemes for "poverty reduction" or "progress" to justify interventions in its environment and society. Some of these projects have resulted in severe, often unintended, environmental effects, such as silting of waterbodies that are surrounded by embankments; biodiversity loss and weakening of the sea walls (which protect against floods) resulting from tiger-prawn monoculture; and loss of soil fertility in intensive agriculture. Camelia Dewan utilizes ethnography and environmental history to highlight flawed assumptions of international development projects in Bangladesh, which often misread the coastal landscape by attributing causality solely to climate change. Examination of multiple and often conflicting perspectives-from poor rural coastal populations, middle-class elites, political actors, and NGO staff-shows how, since the colonial era, Bangladesh has endured intrusions, and how its current environmental crisis goes beyond global warming. This case study informs broader issues worldwide by documenting how the idea of climate change shapes development projects in the Global South, and the extent to which these endeavors correspond with the problems and concerns of populations they are intended to help. This provocative study will be welcomed by readers in the fields of environmental anthropology, human geography, and development studies"--
