Severe Community Acquired Pneumonia is a book in which chapters are authored and the same topics discussed by North American and European experts. This approach provides a unique opportunity to view the different perspectives and points of view on this subject. Severe CAP is a common clinical problem encountered in the ICU setting. This book reviews topics concerning the pathogenesis, diagnosis and management of SCAP. The discussions on the role of alcohol in severe CAP and adjunctive therapies are important topics that further our understanding of this severe respiratory infection.

Critical care practitioners are often the initial providers of care to seriously ill patients with infections. This book provides clinicians practicing in the intensive care unit with a reference to help guide their care of infected patients. It brings together a group of international authors to address important topics related to infectious diseases for the critical care practitioner.

Pneumonia (along with influenza) is the sixth leading cause of death in adults. About 4 million adults develop pneumonia each year in the US, resulting in 64 million days of restricted activity, 39 million days of bed confinement, and 10 million days of lost work. Yet the admission rates to hospital, length of stay, investigations, antimicrobial therapy and prevention strategies vary greatly from one geographic area to the

next, and the scientific basis for many of our management strategies for pneumonia is weak to nonexistent. There are over 100 microbial agents that can cause pneumonia and many of these, especially *Streptococcus pneumoniae*, Group A streptococcus, and *Staphylococcus aureus*, are in a state of flux in terms of changing antimicrobial resistance. This book is designed to provide new information about pneumonia and identify critical research questions that will come to the fore as we enter the 21st century.

The seventh edition of the Canadian Immunization Guide was developed by the National Advisory Committee on Immunization (NACI), with the support of the Immunization and Respiratory Infections Division, Public Health Agency of Canada, to provide updated information and recommendations on the use of vaccines in Canada. The Public Health Agency of Canada conducted a survey in 2004, which confirmed that the Canadian Immunization Guide is a very useful and reliable resource of information on immunization.

The quinolones are making a significant contribution to patient care and have added a new dimension to antibacterial therapy. During the last decade, they became important agents for treating hospital-acquired infections. This volume covers their mechanisms of action, resistance mechanisms and epidemiology, pharmacokinetics, safety and clinical applications. Their effectiveness for respiratory, urinary, sexually transmitted, skin, soft tissue, bone and joint infections, infections of the eyes, ears, nose and throat, and less common infections such as mycobacterial, *Brucella* and others are reviewed. Also described is their use in pediatric, oncology and immunocompromised patients. The quinolone story continues to be intriguing with exciting future implications. This monograph is an important comprehensive review and update for researchers and clinicians in pharmacology, clinical medicine, molecular and cell biology, epidemiology and the pharmaceutical industry.

Written specifically for the needs of family and adult nursing students, medical students, and primary care practitioners in Canada, this gold standard reference of family practice in America—named a 2013 Doody's core title and 1st-place winner of the American Journal of Nursing book award in 2017—now provides current Canadian practice protocols for professional standards of care across the life span.
