Advanced Life Support MCQ | UK and European ALS ... The European Resuscitation Council (ERC) provides two sets of MCQs and four Cardiac Arrest Simulation Test (CASTest) scenarios for the assessments according to guidelines 2005. Aims To analyse the reliability and validity of the individual sub-tests provided by ERC and to find a combination of MCQ and CASTest that provides a reliable and valid single effect measure of ALS competence.

Assessment of Advanced Life Support competence when ... Assessments are based on clinical scenarios that allow the candidate to demonstrate the core competencies that have been taught on the course. These include airway management, initial assessment, resuscitation and cardiac arrest management (CASTest) and a multiple choice questionnaire (MCQ).

As it emerges from centuries of social, military, and political strife, China—which represents one fifth of the world's population and its third largest economy—is poised to play a major role in global business. But what will that role be? In this book, two experts, who have created business scenarios for some of the world's largest organizations—including Royal Dutch/Shell, AT&T, IBM, and Motorola—present three very informed versions of how China's future may unfold in the coming years and what it means to the rest of the world. These scenarios provide a foundation on which today's companies can build business strategies for years to come. Click here to read the preface from this book.

This new edition of the bestselling Pocket Guide to Teaching for Medical Instructors by the Advanced Life Support Group and Resuscitation Council (UK) provides an updated guide for instructors teaching on life support courses. Compiled by authors experienced in designing highly respected and successful courses, this guide gives sound, clear advice on the most effective methods of teaching. Content covers an introduction to the basic principles of teaching and deals in detail with a number of modes of teaching on courses. Lectures, skill stations, role play, workshops, discussions and e-learning are all explored and in each case practical guidance is given to help the reader to become a more effective teacher. Though designed for trainees on life support instructor courses, Pocket Guide to Teaching for Medical Instructors contains practical guidance applicable to any health professional interested in becoming a more effective teacher.

Manual for Advanced Life Support in Australia. Supports Australian Resuscitation Council ALS2 Course

Countries that have sustained rapid growth over decades have typically had a strong public commitment to expanding education as well as to improving learning outcomes. South Asian countries have made considerable progress in expanding access to primary and secondary schooling, with countries having achieved near-universal enrollment of the primary-school-age cohort (ages 6†11), except for Afghanistan and Pakistan. Secondary enrollment shows an upward trend as well. Beyond school, many more people have access to skilling opportunities and higher education today. Although governments have consistently pursued policies to expand access, a prominent feature of the region has been the role played by nonstate actors—private nonprofit and forprofit entities—in expanding access at every level of education. Though learning levels remain low, countries in the region have shown a strong commitment to improving learning. All countries in South Asia have taken the first step, which is to assess learning outcomes regularly. Since 2010, there has been a rapid increase in the number of large-scale student learning assessments conducted in the region. But to use the findings of these assessments to improve schooling, countries must build their capacity to design assessments and analyze and use findings to inform policy.

The evaluation of potential mutagenic activity is a critical step in the assessment of the safety of both new and pre-existing chemical types. In Genetic Toxicology: Principles and Methods, expert contributors help to satisfy the demand for education in this tremendously important area of study. The volume covers three basic areas: the scientific basis of the discipline, the methodologies of the main test assays, and the application of the methods, all aimed primarily at scientists in the safety departments of the industries working with both natural and synthetic chemicals. Written in the highly successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Intuitive and cutting-edge, Genetic Toxicology: Principles and Methods provides crucial support to both laboratory workers in providing quality information on the appropriate application of techniques and to study directors in their assay selection and protocol design in this vital field.

Managing the Unknown offers a new way of looking at the problem of managing projects in novel and unknown environments. From Europe's leading business school, this book shows how to manage two fundamental approaches that, in combination, offer the possibility of coping with unforeseen influences that inevitably arise in novel projects: \* Trial-and-Error Learning allows for redefining the plan and the project as the project unfolds \* Selectionism pursues multiple, independent trials in order to pick the best one at the end Managing the Unknown offers expert guidelines to the specific project mindsets, infrastructures, and management methods required to use these project management approaches and achieve success in spite of unforeseen obstacles. This book equips readers with: \* Causal explanations of why unforeseeable factors in novel projects make traditional project planning and project risk management insufficient \* Directly applicable management tools that help managers to guide novel and high-uncertainty projects \* Real-world case studies of both successful and unsuccessful approaches to managing high uncertainty in novel projects

Concise and clearly illustrated, the ABC of Resuscitation contains practical information on all aspects of the subject. New guidelines are just one of the changes to the 5th edition of this book. Many of the chapters are completely rewritten, with new material on automated defibrillators, advanced life support including paediatric life support, new drugs plus many new illustrations. The text is relevant for Europe, Australasia, South Africa, South America, Malaysia and the Middle East - especially Israel. Ireland is moving closer to the European position and away from the USA.

this concise book covers all aspects of neonatal resuscitation from the moment of birth to transfer to the neonatal unit. It discusses special considerations, and communication with parents and other professionals. The advice has been drawn up by a working party, giving it the authority of a distinguished body of specialists.
