Post-editing is possibly the oldest form of human-machine cooperation for translation. It has been a common practice for just about as long as operational machine translation systems have existed. Recently, however, there has been a surge of interest in post-editing among the wider user community, partly due to the increasing quality of machine translation output, but also to the availability of free, reliable software for both machine translation and post-editing. As a result, the practices and processes of the translation industry are changing in fundamental ways. This volume is a compilation of work by researchers, developers and practitioners of post-editing, presented at two recent events on post-editing: The first Workshop on Post-editing Technology and Practice, held in conjunction with the 10th Conference of the Association for Machine Translation in the Americas, held in San Diego, in 2012; and the International Workshop on Expertise in Translation and Post-editing Research and Application, held at the Copenhagen Business School, in 2012.

Written by the International Federation of Mountain Guides Association (IFMGA) certified mountain guides Marc Chauvin and Rob Coppolillo, *The Mountain Guide Manual* is the go-to reference for novice and experienced mountain guides, as well as advanced recreationalists. Covering everything from rope systems and belaying to advice on group dynamics and rescuing, the manual combines practical how-to instruction with clear graphics, illustrations, and awe-inspiring alpine imagery.

A Project-Based Approach to Translation Technology provides students of translation and trainee translators with a real-time translation experience, with its translation platforms, management systems, and teamwork. This book is divided into seven chapters reflecting the building blocks of a project-based approach to translation technology. The first chapter identifies the core elements of translation environment tools and collaborative work methods, while Chapters 2 and 4 review the concept of translation memory and terminology databases and their purposes. Chapter 3 covers machine translation embedded in the technology, and the other chapters discuss human and technological quality assurance, digital ethics and risk management, and web-based translation management systems. Each chapter follows a common format and ends with project-based assignments. These assignments draw and build on real-time contexts, covering the consecutive steps in the workflow of large and multilingual translation projects. Reviewing the many translation technology tools available to assist the translator and other language service providers, this is an indispensable book for advanced students and instructors of translation studies, professional translators, and technology tool providers.
