young doctor, is compelled to unravel the mysterious circumstances surrounding her beloved grandfather ' s recent death. Searching for clues, she turns to his worn copy of *The Jungle Book* and the stories he told her of his encounters over the years with “ the deathless man. ” But most extraordinary of all is the story her grandfather never told her—the legend of the tiger ' s wife. NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Wall Street Journal • O: The Oprah Magazine • The Economist • Vogue • Slate • Chicago Tribune • The Seattle Times • Dayton Daily News • Publishers Weekly • Alan Cheuse, NPR ' s All Things Considered “ Stunning . . . a richly textured and searing novel. ” —Michiko Kakutani, The New York Times “ [Obreht] has a talent for subtle plotting that eludes most writers twice her age, and her descriptive powers

suggest a kind of channeled genius. . . . No novel [this year] has been more satisfying. ” —The Wall Street Journal

“ Filled with astonishing immediacy and presence, fleshed out with detail that seems firsthand, *The Tiger ’ s Wife* is all the more remarkable for being the product not of observation but of imagination. ” —The New York Times Book Review “ That *The Tiger ’ s Wife* never slips entirely into magical realism is part of its magic. . . . Its graceful commingling of contemporary realism and village legend seems even more absorbing. ” —The Washington Post

Crystallization is an important separation and purification process used in industries ranging from bulk commodity chemicals to specialty chemicals and pharmaceuticals. In recent years, a number of environmental applications

"Global trade and colonial extraction drew the early modern world closer together, carving out circuits in which silver and gold crossed oceans and continents.¹ What forms did these metals take, and whose practices constituted these forms? The 3,500 coins in the collection of the Dutch lawyer and numismatist Pieter Verkade offers some answers to this question.² When it was sold in 1849, the public could view it in the Huis met de Hoofden in Amsterdam. Just as the house, which once belonged to the metal trading families De Geer and Grill, the collection was a relic of the time when one axis of world trade had run through the marshlands of Holland before it tilted further to the English Southwest. As visitors pulled out the drawers of Verkade's finely carved mahogany cabinets, a wide world unfurled

A new approach to safety, based on systems thinking, that is more effective, less costly, and easier to use than current techniques. Engineering has experienced a technological revolution, but the basic engineering techniques applied in safety and reliability engineering, created in a simpler, analog world, have changed very little over the years. In this groundbreaking book, Nancy Leveson proposes a new approach to safety—more suited to today's complex, sociotechnical, software-intensive world—based on

modern systems thinking and systems theory. Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept, and testing her new model extensively on real-world examples, Leveson has created a new approach to safety that is more effective, less expensive, and easier to use than current techniques. Arguing that traditional models of causality are inadequate, Leveson presents a new, extended model of causation (Systems-Theoretic Accident Model and Processes, or STAMP), then shows how the new model can be used to create techniques for system safety engineering, including accident analysis, hazard analysis, system design, safety in operations, and management of safety-critical systems. She applies the new techniques to real-world events including the friendly-fire loss of a U.S. Blackhawk helicopter in the first Gulf

War; the Vioxx recall; the U.S. Navy SUBSAFE program; and the bacterial contamination of a public water supply in a Canadian town. Leveson's approach is relevant even beyond safety engineering, offering techniques for “ reengineering ” any large sociotechnical system to improve safety and manage risk.

Presents a biography of the astronaut, Michael Collins, who circled the moon in the Apollo 11 space capsule while his colleagues Neil Armstrong and Buzz Aldrin landed the lunar module and walked on the moon.

This book brings together recent research on interpersonal relationships in education from a variety of perspectives including research from Europe, North America and

Australia. The work clearly demonstrates that positive teacher-student relationships can contribute to student learning in classrooms of various types. Productive learning environments are characterized by supportive and warm interactions throughout the class: teacher-student and student-student. Similarly, at the school level, teacher learning thrives when there are positive and mentoring interrelationships among professional colleagues. Work on this book began with a series of formative presentations at the second International Conference on Interpersonal Relationships in Education (ICIRE 2012) held in Vancouver, Canada, an event that included among others, keynote addresses by David Berliner, Andrew Martin and Mieke Brekelmans. Further collaboration and peer review by the editorial team resulted in the collection of original research that this book

comprises. The volume (while eclectic) demonstrates how constructive learning environment relationships can be developed and sustained in a variety of settings. Chapter contributions come from a range of fields including educational and social psychology, teacher and school effectiveness research, communication and language studies, and a variety of related fields. Together, they cover the important influence of the relationships of teachers with individual students, relationships among peers, and the relationships between teachers and their professional colleagues.
