In July 2009 Germany hosted the 50th International Mathematical Olympiad (IMO). For the very first time the number of participating countries

exceeded 100, with 104 countries from all continents. Celebrating the 50th anniversary of the IMO provides an ideal opportunity to look back over the past five decades and to review its development to become a worldwide event. This book is a report about the 50th IMO as well as the IMO history. A lot of data

This book explains why complex systems research is important in understanding the

structure, function and  
dynamics of complex  
natural and social

phenomena. It

illuminates how

complex collective

behavior emerges from

the parts of a system,

due to the interaction

between the system and

its environment.

Readers will learn the

basic concepts and

methods of complex

book is not highly  
technical

mathematically, but  
teaches and uses the  
basic mathematical  
notions of dynamical

students of science

Subsequent sections
