A brilliant and courageous doctor reveals, in gripping accounts of true cases, the power and limits of modern medicine. Sometimes in medicine the only way to know what is truly going on in a patient is to operate, to look inside with one's own eyes. This book is exploratory surgery on medicine itself, laying bare a science not in its idealized form but as it actually is -- complicated, perplexing, and profoundly human. Atul Gawande offers an unflinching view from the scalpel's edge, where science is ambiguous, information is limited, the stakes are high, yet decisions must be made. In dramatic and revealing stories of patients and doctors, he explores how deadly mistakes occur and why good surgeons go bad. He also shows us what happens when medicine comes up against the inexplicable: an architect

Autobiography of Atul Gawande, a surgeon in United States of America; this personal narrative exposes surgery of its follies to the extent it is human as it is idealised science.

NATIONAL BESTSELLER The New York Times bestselling author of *Being Mortal* and *Complications* examines, in riveting accounts of medical failure and triumph, how success is achieved in a complex and risk-filled profession The struggle to perform well is universal: each one of us faces fatigue, limited resources, and imperfect abilities in whatever we do. But nowhere is this drive to do better more important than in medicine, where lives are on the line with every decision. In this book, Atul Gawande explores how doctors strive to close the gap between best intentions and best performance in the face of obstacles that sometimes seem insurmountable.

Gawande's gripping stories of diligence, ingenuity, and what it means to do right by people take us to battlefield surgical tents in Iraq, to labor and delivery rooms in Boston, to a polio outbreak in India, and to malpractice courtrooms around the country. He discusses the ethical dilemmas of doctors' participation in lethal injections, examines the influence of money on modern medicine, and recounts the astoundingly contentious history of hand washing. And as in all his writing, Gawande gives us an inside look at his own life as a practicing surgeon, offering a searingly honest firsthand account of work in a field where mistakes are both unavoidable and unthinkable. At once unflinching and compassionate, *Better* is an exhilarating journey narrated by "arguably the best nonfiction doctor-writer around" (Salon). Gawande's investigation into medical professionals and how they progress from merely good to great provides rare insight into the elements of success, illuminating every area of human endeavor.

The New York Times bestselling author of *Being Mortal* and *Complications* reveals the surprising power of the ordinary checklist. We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication.

Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous difference, *The Checklist Manifesto* is essential reading for anyone working to get things right.

The international bestseller from the author of *Being Mortal* In these gripping accounts of true cases, bestselling author Atul Gawande performs exploratory surgery on medicine itself, laying bare a science not in its idealised form, but as it actually is - complicated, perplexing and profoundly human. This is a stunningly well-written account of the life of a surgeon: what it is like to cut into people's bodies and the terrifying - literally life and death - decisions that have to be made: operations that go wrong; of doctors who go to the bad; why autopsies are necessary; what it feels like to insert your knife into someone. The volume is authored by a colorectal surgeon with long-standing clinical and scientific experience and is devoted to the management of complications following surgery of the anorectum and the pelvic floor. It is aimed not only at general surgeons, perineologists and, of course, proctologists, but also at gastroenterologists, endoscopists, radiologists and physiotherapists, i.e. those who may be involved in both diagnosis and cure whenever an adverse event, either unpredictable or potentially preventable, causes an intra- or postoperative, early or late, mild or life-threatening complication. Severe bleeding, dehiscence, perforation, anorectal stricture, fecal incontinence, and even caval vein thrombosis, fatal Fournier gangrene and pneumomediastinum may occur after anal surgery. The incidence, pathogenesis prevention and treatment of such events are discussed in detail in 10 chapters with 30 tables, 200 illustrations and more than 1000 references. Both conventional procedures and recent innovations are reported. "Unforgettable clinical cases (complications with litigation)" and "Tips and Tricks" are sections increasing the appeal of this book. The approach is "evidence-based" and holistic, focusing on anorectal problems while taking into consideration whole body-mental unity—showing, for example, that a non-healing perineal wound may be due to hypo-pituitarism, and failure after a re-intervention may be related to psychological distress.

The aim of this book is to help clinicians to reduce the risk of complications after vascular and endovascular surgery. Whilst it is a surgical truism that the surgeon who does the most operations has the most complications (an acknowledgement of the fact that all vascular and endovascular procedures are potentially hazardous, and some extremely so), some surgeons seem to have more complications than others. This book is for all surgeons and radiologists who accept the challenge continually to improve their results. Each chapter is authored by an experienced (endo)vascular specialist who will have witnessed firsthand the perils and pitfalls of vascular procedures. They have seen all the complications, and even occasionally made errors of judgement. The chapters are full of information to help the reader avoid similar hazards in future. We live in a world of high patient expectation, where complications are seen as 'someone's fault'. Clinicians are familiar with innovations such as outcomes audit and assessment, procedural governance and quality improvement programmes. There is pressure to show progressive improvement. First class surgery is a combination of knowledge and skill and perhaps just a little luck, though as is oft quoted 'the more you practice, the luckier you get'. The information in this book will provide insights, protocols, and tips and tricks to minimise the risks of procedures in vascular and endovascular surgery. It is therefore essential reading for anyone who treats patients with vascular disease.

that predispose a complication, and if it is presented, to have all anatomical, surgical and updated scientific elements to resolve the situation successfully. The book's content is designed for easy and thorough reading. It is organized in sections that include an overview of robotic surgery, principles of anesthesia and complications, as well as recognition of failure in the instruments used in this kind of surgery. It then offers a detailed discussion of each robotic urologic surgical procedures, both the upper urinary tract, lower urinary tract, oncological procedures, reconstructive and those that are managed in conjunction with other specialties such as gynecology, pediatrics, and other highly specialized as the case of kidney transplantation. Chapters are written by experts in the field who indicate step by step review of each clinical case in particular to prevent the occurrence of associated complications, including providing information on legal aspects. The book is written for both novice surgeons and all those experts who interact daily in the wonderful world of robotic surgery. Containing the points of view and recommendations of the most experienced surgeons in each of the procedures, it is as if the professor were in the operating room with the surgeon to explain how to prevent, identify and treat complications. Complications in Robotic Urologic Surgery represents the complete collection of all the stages of complications in urologic robotic surgery and will be indispensable for all robotic surgeons.

encountered during and after surgical procedures. The book offers detailed guidance and techniques for recognizing and controlling complications in the operating room, emergency ward, or intensive care unit. It spans the vast array of complications related to preoperative, intra-operative, and postoperative events. The coverage is comprehensive and includes many surgical sub-specialties including critical care, endocrine, cardiothoracic, vascular, burns and wound healing, orthopedic, pediatric, and transplant. A key feature of this new edition is the addition of succinct summary tables that list the most common complications related to each area of surgery or trauma and how to avoid them. Nine new chapters are included, and all previous chapters have been updated, making it a completely up-to-date reference for surgical residents, general surgeons, critical care surgeons, and those in training.
