Working on the census Applying for jobs. If you ' re a people person, have great customer service skills and want to be part of something that affects all of us, then apply for a job with the census.. For Census 2021, we ' ll be hiring at least 30,000 field staff across England and Wales.

Working on the census - Census 2021

At AXA, we ' re committed to making our claims process as simple and clear as possible – that ' s what helps us pay out on 98% of van insurance claims.** But like all insurance policies, our van insurance policy includes certain conditions and requirements that you need to meet.

Making a Van Insurance Claim - AXA BI

AXA in the Gulf AXA, one of the largest global insurers, is a worldwide leader in Insurance and Asset Management with a purpose of empowering people to live better lives. In the Gulf region, AXA has been present for more than 68 years, offering a wide range of insurance products and services for corporate, SME and individual customers.

The emergence of cloud computing, internet of things, mobile technologies, and social networking have created better-connected members of the public who are digitally linked with each other in real time. Establishing this two-way interaction between citizens and governments has thus become attractive and an expected feature of governments worldwide. Previously, federal and local governments relied on first-generation technologies to provide basic levels of automation and digitization. Now, because of their desire to become more open, transparent, accountable, and connected, newer technologies including cloud computing, mobile networking, big data analytics, Web 2.0, and social media must be developed and utilized. Web 2.0 and Cloud Technologies for Implementing Connected Government is an essential reference source that presents various dimensions of connected government and connected e-governance visions as well as the latest emerging technologies. Offering development methodologies, practical examples, best practices, case studies, and the latest research, this book covers new strategies for implementing better-connected government models and the technologies that serve to establish these frameworks, including in-depth examinations of mobile technologies, automation, business intelligence, etc. as well as the various ethical and security issues surrounding the use and protection of data. This book is essential for federal, state, and

local government officials; policymakers; civil servants; IT specialists; security analysts; academicians; researchers; and students.

Lie groups were introduced in 1870 by the Norwegian mathematician Sophus Lie. A century later Jean Dieudonné quipped that Lie groups had moved to the center of mathematics and that one cannot undertake anything without them. If a complete topological group G can be approximated by Lie groups in the sense that every identity neighborhood U of G contains a normal subgroup N such that G/N is a Lie group, then it is called a pro-Lie group. Every locally compact connected topological group and every compact group is a pro-Lie group. While the class of locally compact groups is not closed under the formation of arbitrary products, the class of pro-Lie groups is. For half a century, locally compact pro-Lie groups have drifted through the literature, yet this is the first book which systematically treats the Lie and structure theory of pro-Lie groups irrespective of local compactness. This study fits very well into the current trend which addresses infinite-dimensional Lie groups. The results of this text are based on a theory of pro-Lie algebras which parallels the structure theory of finite-dimensional real Lie algebras to an astonishing degree, even though it has had to overcome greater technical obstacles. This book exposes a Lie theory of connected pro-Lie groups (and hence of connected locally compact groups) and illuminates the manifold ways in which their structure theory reduces to that of compact groups on the one hand and of finite-dimensional Lie groups on the other. It is a continuation of the authors' fundamental monograph on the structure of compact groups (1998, 2006) and is an invaluable tool for researchers in topological groups, Lie theory, harmonic analysis, and representation theory. It is written to be accessible to advanced graduate students wishing to study this fascinating and important area of current research, which has so many fruitful interactions with other fields of mathematics.

In presenting the concepts and the logical structure of the reasoning offered by game theory and their applications, the book explains the rational process of decision making in the framework of firm management and market competition. The book will expose both general teachings and a comprehensive analysis applied to specific case studies of various sectors of the economy.

This book will be a “ must ” for people who want good knowledge of big data concepts and their applications in the real world, particularly in the field of insurance. It will be useful to people working in finance and to masters students using big data tools. The authors present the bases of big data: data analysis methods, learning processes, application to insurance and position within the insurance market. Individual chapters will be written by well-known authors in this field.

This is a unique collection of papers, all written by leading specialists, that presents the most recent results and advances in stability theory as it relates to fluid flows. The stability property is of great interest for researchers in many fields, including mathematical analysis, theory of partial differential equations, optimal control, numerical analysis, and fluid mechanics. This text will be essential reading for many researchers working in these fields.

PRINCIPLES OF RESPONSIBLE MANAGEMENT offers an international, scientifically sound, and strictly practice-related perspective. It is the first official textbook of the United Nations for the Principles for Responsible Management Education (PRME) academic network, and a reference book for companies of the United Nations Global Compact Initiative. It is a primary text for traditional business and society, business ethics, corporate social responsibility, and sustainability courses, or may serve as a practitioner handbook. Contributors are renowned academic professionals in their respective chapter topics as well as distinguished business practitioners who contribute highly relevant practice cases. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This book examines how regulators and policymakers from nine different countries have dealt with Uber, and initiates a legal dialogue between different jurisdictions that could potentially pave the way to a harmonized approach in regulating Uber. The case studies, conducted in Brazil, Germany, Italy, Mexico, Spain, South Africa, Turkey, the UK and the US reveal the case law and regulatory responses that have been adopted in various areas of law. Legal issues relevant to Uber include market regulation, labor law, civil liability, consumer protection, unfair competition and antitrust law. The book thus compares and contrasts the regulatory policy implications of the disruptive innovation created by Uber in the area of transport services. The book starts with a conceptual overview of the legal challenges posed by Uber and concludes with comparative findings based on the individual case studies. In addition to introducing academics and legal practitioners to the theoretical and practical legal problems they may encounter in connection with Uber, the book will especially appeal to policymakers, who can benefit from and compare the experiences of other jurisdictions.
