recounts the experiences and rationale that led him to create the entirely new profession now recognized and practiced as Construction Management. It evolved from his work as the construction lead of the "owner/builder" firm Tishman Realty and Construction, and his personal role as hands-on Construction Manager in the building of an astonishing array of what were at the time the world's tallest and most complex projects. These include The world's first three 100-story towers---the original "twin towers" of the World Trade Center in Manhattan and the Hancock Tower in Chicago. The Epcot Center at Disney World. The Renaissance Center in Detroit. New York's Madison Square Garden. Tishman interweaves the stories behind the construction of these and many other important buildings and projects with personal reminiscences of his dealings with Henry Ford, Jr., Disney's Michael Eisner, casino magnate Steve Wynn, and many others into a practical history of the field of Construction Management, which he pioneered. This book will be of interest not only to a general public interested in the stories and personalities behind many of the most iconic construction projects of the post-World War II period in the United States but to students of engineering and architecture and members of the new field of Construction Management.

This new edition of an informative and accessible book guides building surveyors and facilities managers through the key aspects of property maintenance and continues to be of value to both students and practitioners. With the increasing cost of new-build, effective maintenance of existing building stock is becoming ever more important and building maintenance work now represents nearly half of total construction output in the UK. Building Maintenance Management provides a comprehensive profile of the many aspects of property maintenance. This second edition has been updated throughout, with sections on outsourcing; maintenance planning; benchmarking and KPIs; and current trends in procurement routes (including partnering and the growth of PFI)

integrated into the text. There is also a new chapter on the changing context within which maintenance is carried out, largely concerned with its relationship to facilities management. More coverage is given of maintenance organisations and there are major updates to relevant aspects of health and safety and to contract forms.

This is the classic practical introduction to the broad principles of building management. It is suitable for both students and practising construction professionals who are concerned with greater efficiency within the construction industry. As a general textbook for the student, the introduction covers the entire field in some depth providing a firm foundation for additional reading. The text is closely geared to the chartered Institute of Building (Member) Parts I and II examinations. The book includes examples based upon and related to working experience. It will also be found valuable by students reading for the examinations of other professional bodies in the construction industry, and by HNC/D students.

"A useful overview for both beginners and seasoned professionals, this book provides insight and practical guidelines on the day-to-day processes of construction estimating and project management. Kitchens reviews the varied tasks of the estimator, project manager, and project superintendent, from the decision to bid to completing paperwork and managing project risks. He draws from his years of professional experience, as well as case histories, to examine estimate preparation, procedures to follow on bid day, job site safety, quality assurance, financial considerations, cost control, and much more. Ethics in construction, errors in estimating and project management, and information regarding training key personnel are also addressed."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Written for contractors and endorsed by the Associated General Contractors of America Written specifically for contractors, this "how-to" book enables you to meet the challenges of green building construction. You'll discover how constructing environmentally friendly, sustainable buildings influences project management, delivery, documentation, and risk. Moreover, the book guides you through these important considerations at all phases of a green construction project, including: Bidding and contracting Managing green design when the contractor works as a design builder Subcontracting Procurement Construction management Project commissioning and closeout This book is endorsed by the Associated General Contractors of America (AGC) and was written with the assistance and advice of a specially assembled AGC task force. With a focus on the green building process from the contractor's viewpoint, the book avoids endorsing any one green building rating system in favor of presenting the business fundamentals common to them all. Throughout the presentation, flowcharts and other features offer working tools for successfully managing green construction projects. Plus, real-world case studies developed through discussions with the actual contractors involved help you understand exactly what to expect and how to best manage constructing a green building. In short, this is one book that you need to have on hand to be a part of the rapidly growing green building movement.
