TRB's Transit Cooperative Research Program (TCRP) Report 139: Guidebook for Recruiting, Developing, and Retaining Transit Managers for Fixed-Route Bus and Paratransit Systems explores resources for fixed-route bus, general public demand response, and Americans with Disabilities Act (ADA) paratransit systems resources to assist in the recruitment, development, and retention of managers. The Guidebook is accompanied by CRP-CD-77, which provides Model Job Descriptions for 32 broad job titles that indicate the structure and content for job descriptions for manager jobs. The CD-ROM is also available for download from TRB's website as an ISO image. A separate report presenting the research methodology, the results of a literature review, and the results from focus groups held with 15 other non-transit public and private sector organizations used in production of TRCP Report 139 is available online.

This book constitutes the refereed proceedings of the 5th European Workshop on Case-Based Reasoning, EWCBR 2000, held in Trento, Italy in September 2000. The 40 revised full papers presented together with two invited contributions were carefully reviewed and selected for inclusion in the book. All curves issues in case-based reasoning, ranging from foundational and theoretical aspects to advanced applications in various fields are addressed.

Worldwide there is a growing interest in efficient planning and the design, construction and maintenance of transportation facilities and infrastructure assets. The 3rd International Conference on Transportation Infrastructure ICTI 2014 (Pisa, April 22-25, 2014) contains contributions on sustainable development and preservation of transportation infrastructure assets, with a focus on eco-efficient and cost-effective measures. Sustainability, Eco-efficiency and Conservation in Transportation Infrastructure Asset Management includes a selection of peer reviewed papers on a wide variety of topics: • Advanced modeling tools (LCA, LCC, BCA, performance prediction, design tools and systems) • Data management (monitoring and evaluation) • Emerging technologies and equipments • Innovative strategies and practices • Environmental sustainability issues • Eco-friendly design and materials • Re-use or recycling of resources • Pavements, tracks, and structures • Case studies Sustainability, Eco-efficiency and Conservation in Transportation Infrastructure Asset Management will be particularly of interest to academics, researchers, and practitioners involved in sustainable development and maintenance of transportation infrastructure assets.

Managing building services contractors can prove to be a minefield. The most successful jobs will always be those where building site managers have first built teams focused on tackling issues that might cause adversarial attitudes later on and jeopardize the project. The author shows how a simple common management approach can improve site managers' competency in overseeing building services contractors, sub traders and specialists, and maximize the effectiveness of time spent on building services.

This book emphasises the practicalities of site supervision including the education and training of personnel and current legislation dealing with industrial relations, conditions of employment, health and welfare and first-aid regulations. Suitable for students studying for higher certificate/diploma, degree or professional examinations in building, site practice and construction management, this second edition will also be very useful reading for the practising site manager.

Managing IT in Construction/Managing Construction for Tomorrow presents new developments in:- Managing IT strategies - Model based management tools including building information modeling- Information and knowledge management- Communication and collaboration - Data acquisition and storage- Visualization and simulation- Architectural design and

A majority of large-scale construction and major infrastructure projects are funded by public funds from taxpayers. However, these projects are often subject to severe delays and cost overruns. Large-Scale Construction Project Management: Understanding Legal and Contract Requirements introduces integrated approaches to project management and control mechanisms to effectively manage large-scale construction projects. It explains the contractual requirements and associated legal principles under the latest edition of the leading standard forms of contracts, including FIDIC 2017, NEC4, and JCT 2016. It explains integrated project governance regarding time, cost, risk, change, contract management, and more. Further, it discusses the legal issues of scheduling delays and disruptions regarding the Delay and Disruption Protocol (Society of Construction Law) as well as Forensic Schedule Analysis guidance (American Association of Cost Engineering). Features: Provides strategies to effectively resolve disputes during construction projects Examines Quantitative Schedule Risk Analysis (QSRA) and Quantitative Cost Risk Analysis (QCRA) Introduces the most recent software and techniques used in managing large-scale construction projects This book serves as a useful resource for project control and management professionals, researchers in construction management and project management, and students in building construction management and project management.

This study, originally published in 1990, introduces a rich array of approaches to defining and developing the competency of managerial performance. Indeed, the authors are not afraid to cross swords with each other over a number of controversial issues. They provide a stimulating and often contentious overview of the best ways to develop and use managerial profiles. This book will reveal to senior managers and management developers how competencies can be used as a strategic weapon to improve a range of activities including assessment, management development and leadership planning.

A shortage in experienced skilled construction managers is foreseen in the near future. A big contributing factor is the entering of non-purpose-fit candidates into construction management programmes. Valuable time and resources are wasted on students enrolled in construction management programmes, entering construction management positions and ultimately leaving these positions due to a common misconception of the actual work conditions of a construction manager. The philosophical framework constituted an underlying pragmatic philosophical underpinning. The researcher opted for mixed methods and action research approached within this study. The research study was restricted to cross-sectional time-horizons as the thesis had to be completed within a specific time frame. The aim of this research study is to suggest a purpose-fit selection of the construction manager in South Africa. This will link with the soft skills in the competency domain that is currently needed in the industry and in the profession itself. It is suggested that construction management students should do practical work for a year before they start their studies. This will give them a better understanding of the work conditions, pressure and work-life balance associated with the construction industry, as this is not tested in the online SAPI personality test. Tertiary education in construction management and proper practical experience are crucial; but without the necessary soft skills and purpose-fit personality profile, the construction manager would not be successful on a project.
