The Certified Professional Forecaster (CPF) certification is essential for professionals involved in the areas of supply side business forecasting. Candidates must pass 3 exams in order to earn the CPF designation.

The CPF exams target those who work on the supply side. Topics are relevant to supply chain forecasting so you must know SCM (supply chain management) inside and out in addition to understanding the various business forecast techniques. To pass the CPF exams, I suggest that you do lots of readings - readings that are about the current industry trend, the best practices, case analysis or even commercials. Know what is happening in the supply world. Know how good or bad different forecast techniques are. From these readings you should be able to build up the "business sense" you need for passing the exams. There are 3 exams in the CPF program. They are: Exam 1 - Role of Forecasting & Planning in Decision Making - Demand Planning (Demand Sensing, Shaping, & Creating) - Forecasting & Planning Process - Consumption (POS Data) Based Forecasting & Planning - Consensus Forecasting & Planning - Sales & Operations Planning (S&OP) Process - Collaborative, Planning, Forecasting, & Replenishment (CPFR) Exam 2 - Data Analysis & Treatment - Fundamentals of Models & Modeling - Types of Models - Time Series Models - Model Selection - Metrics: Measuring Forecast Error and Performance Exam 3 - Forecast Reporting & Presentation - Forecast Communication - Winning Support and Confidence of Management - Getting Buy-in from Stakeholders Instead of following the "official" topic flow, this book is structured into parts. The first part deals with knowledge on supply chain. The other parts deal with all sorts of business forecasting techniques and methods. Think of part 1 as the foundation knowledge you need to prepare for the exams. The 3 exams have topics that are inter-related. We therefore like to recommend that you study all of them together instead of studying on a per-exam basis. Get yourself fully prepared on ALL topics prior to sitting any single exam. Do not attempt to take the exams unless you have hands-on skills making forecasts. This study notes provide study material for exam preparation. However, this is not intended to be used as a tutorial on statistics or forecasting techniques. You should go through sufficient hands on exercises before using this study notes. A competent test taker will always use multiple resources for preparation. There are other readings you will find helpful in learning the subjects. Topics not listed in the official subject list may still show up in the exams for purpose of distraction. Therefore, do as many readings as possible.

This is the most comprehensive book written in the area of demand planning and forecasting, covering practically every topic which a demand planner needs to know. It discusses not only the different models of forecasting in simple and layman terms, but also how to use forecasts effectively in business planning. It covers forecasting processes from S&O to Consensus Forecasting to Sales & Operation Planning (S&OP) to Collaborative Planning, Forecasting and Replenishment (CPFR) to Integrated Business Planning (IBP), and describes how each one improves over the other. It gives many real life cases and examples to make the point. No matter how accurate forecasts are they have no value unless they are used. For that, it explains how to report, present and sell forecasts to management. Nothing improves unless it is measured. It discusses in detail key performance indicators, which are used or should be used in business. Also, what we can do to improve forecasts. Above all, it brings out a number of worst practices, with the thinking once companies recognize what they are doing wrong, they will do something about them. Also, the book discusses the criteria for selecting a forecasting & planning package or system and more.
