Red Cross CPR Steps. 1. Push hard, push fast. Place your hands, one on top of the other, in the middle of the chest. Use your body weight to help you administer compressions that are at least 2 inches deep and delivered at a rate of at least 100 compressions per minute. 2.

CPR Steps | Perform CPR | Red Cross

Give two breaths after every 30 chest compressions. If two people are conducting CPR, give two breaths after every 15 chest compressions. Perform CPR for about two minutes before calling for help unless someone else can make the call while you attend to the infant. Continue CPR until you see signs of life or until medical personnel arrive. Share; Tweet

Cardiopulmonary resuscitation (CPR): First aid - Mayo Clinic

When two rescuers are present, performing CPR on a child is the same as performing CPR on an adult, except that the compression ventilation ratio when 2 rescuers are present drops to 15:2. One or two hands may be used to compress the chest to a depth of 1/3 the diameter of the chest. We ' ll discuss using an AED on a child later on.

BLS Study Guide - National CPR Association

The 2015 guidelines still recommend traditional CPR cycles of 30 chest compressions to two rescue breaths for one-rescuer CPR in all age groups and for two-rescuer CPR in adults. The 15:2 ratio of compressions to breaths remains in the 2015 guidelines for two-rescuer CPR for children and infants.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Rev. ed. of: First aid/CPR/AED for schools and the community. 3rd ed. c2006.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.
