This version of A Government Inspector is a Yorkshire take on Gogol's 1836 fantastical Russian satire. The setting is here transposed to a small northern town in the twenty-first century, geographically and culturally remote from the centre of government. Into a small Pennine town a mysterious stranger is mistaken for a government inspector. Fearing discovery of their corrupt goings-on, the town's unscrupulous councillors attempt to ingratiate themselves. Bribes, backhanders and brown envelopes abound, and the young chap, who has an eye for a quick buck, takes full advantage with hilarious results. Deborah McAndrew's version of A Government Inspector goes beyond literal translation, but is absolutely faithful to Gogol's stated intention to peel away the surface layers of ordinary people and expose the corruption beneath. It's exuberant, brilliantly witty and original, and audiences will revel in the references to government officials' expenses claims and women's beach volley ball... Northern BroadSides, one of the country's finest and best-loved touring theatre companies, breathes life and vigour into this nearly 200-year-old story. Absurdly funny, clever and strangely familiar, this feels to be the next One Man Two Guvnors. The production premieres at Harrogate Theatre from 7 - 22 September before embarking on an English national tour until December 1st.

Winner of a Shingo Prize for Excellence in Manufacturing Research Training Within Industry, by Donald Dinero, explores a crucial piece of a Lean initiative that has been overlooked throughout U.S. industry. The amendments of this third English edition with respect to the second one concern beside some printing errors the replacement of some pictures in part D by more modern ones and updating the list of standards to the state of the fourth German edition. JOSEF KRAUTKRÄMER Cologne, January 1983 Preface to the Second Edition This second English edition is based on the third German edition. In view of most recent technological advances it has become necessary in many instances to supplement the second German edition and to revise some parts completely. In addition to piezo-electric methods, others are now also extensively discussed in Chapter 8. As for the intensity method, ultrasonic holography is treated in the new Section 9. 4. In Part B, for reasons of systematics, the resonance method has been included under transit-time methods. It appeared necessary to elaborate in greater detail the definition of the properties of pulse-echo testing equipment and their measurements (10. 4). The more recent findings of pulse spectroscopy (5. 6) and sound-emission analysis (12) are mentioned only in passing because their significance is still controversial. Apart from numerous additions, particularly those concerning automatic testing installations, Part C also contains a new chapter which deals with tests on nuclear reactors (28), as well as a brief discussion of surface-hardness tests (32. 4). It became impossible to include a critical analysis of the principal standards in Chapter 33.
