In the last few years there has been a great revival of interest in culture-bound psychiatric syndromes. A spate of new papers has been published on well known and less familiar syndromes, and there have been a number of attempts to put some order into the field of inquiry. In a review of the literature on culture-bound syndromes up to 1969 Yap made certain suggestions for organizing thinking about them which for the most part have not received general acceptance (see Carr, this volume, p. 199). Through the seventies new descriptive and conceptual work was scarce, but in the last few years books and papers discussing the field were authored or edited by Tseng and McDermott (1981), Al-Issa (1982), Friedman and Faguet (1982) and Murphy (1982). In 1983 Favazza summarized his understanding of the state of current thinking for the fourth edition of the Comprehensive Textbook of Psychiatry, and a symposium on culture-bound syndromes was organized by Kenny for the Eighth International Congress of Anthropology and Ethnology. The strongest impression to emerge from all this recent work is that there is no substantive consensus, and that the very concept, "culture-bound syndrome" could well use some serious reconsideration. As the role of culture-specific beliefs and practices in all affliction has come to be increasingly recognized it has become less and less clear what sets the culture-bound syndromes apart.

During the course of the struggle of African people against European racism, brutality and domination, many innovative thinkers have risen from our ranks. The greatest and most courageous scholars have devoted their lives to the pursuit of an explanation for the virtually inherent animosity most white people appear to have toward people of color / Unlike her predecessors, Dr. Frances Cress Welsing, a brilliant, Washington, DC psychiatrist has rejected conventional notions about the origin and perpetuation of racism.

"Widdig illuminates the effects of Germany's inflation by drawing on a wide range of canonical literature and films as well as generally unexplored cultural materials such as satirical illustrations, photographs, and pamphlets. Widdig's clear-headed ability to combine cultural analysis with popular social experience makes his book highly readable and a welcome addition to German studies, German cultural history, and discussions of modernity."--BOOK JACKET.

Abstract: A comprehensive report summarizes the past 10 years of research activities and findings concerning the effects of television viewing on child behavior and development. Approximately 90% of all research publications on this topic appeared during this period, representing over 2500 titles. The report is presented in 2 volumes, a summary report and technical reviews. The technical reviews comprise overall, comprehensive, and critical syntheses of the scientific literature on specific topic areas, developed by 24 researchers in this area. The topic areas address such issues as cognitive and emotional aspects of television viewing; television's influences on physical and mental health; television as it relates to socialization and viewer's conceptions of social reality; and television as an American institution. The overall orientation of the report is toward research and public health issues.
