With over 1000 illustrations, this indispensable and entertaining book reveals the fascinating secrets behind the genesis and evolution of 125 car emblems from around the world, including every significant one currently in use and dozens more classic examples. This is an essential reference source for every car aficionado.

This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with “ motor ” referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

The automobile sector is one of the most archetypal global industries and is seen by many as one of the main drivers behind the homogenisation of world markets due to firms' internationalization strategies and the social practices that firms impose. This book argues that this is not entirely the case due to the heterogeneity of firms and the diversity of strategies pursued. It highlights the diversity and forms of internationalization and the preference for regionalization rather than globalization that has occurred over the past decade. This book looks specifically at the American and Asian car industry.

The Political Economy of Independent Ukraine analyses the reasons for the abysmal economic performance of Ukraine during the 1990s. The main thesis is that economic development was blocked by a set of parasitic mechanisms at all levels of the economy that prevented the development of value-added economic activities. These parasitic mechanisms already developed under Soviet rule ('beating the system' by redistributing goods and services while disregarding formal rules) became a widespread practice.

This book criticizes the widespread view that the 1997 Asian crisis was due to 'crony capitalism' and puts the blame instead on misguided liberalization. It analyzes the case of Korea's business conglomerates, the chaebol, with particular attention to the car industry, to show how liberalization contributed to the crisis even at the level of the firm. It shows how those firms that had developed innovative capabilities survived the crisis much better than those that had merely expanded into markets opened up by liberalization.

Lemon-Aid Used Cars and Trucks 20102011 shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years of production. This book offers an exposé of gas consumption lies, a do-it-yourself service manual, an archive of service bulletins granting free repairs, and more.

This new edition is up-to-the minute with the latest marketing buzz, with revelations about the latest campaigns (including the disasters), great illustrations, the latest on e-marketing, and now with full supporting materials for lecturers.

The car industry is considered one of the most archetypal global industries. Nevertheless, it looks more like a world of regions rather than a fully integrated global one. Does regionalism prevail over or complement globalization? Moreover, is there still room for unilateral (go-it-alone) strategies? This volume addresses these questions from the perspective of the car industry, the most important industrial 'carrier' of these developments. *Cars, Carriers of Regionalism?* provides an integral account of the geo-economic and geo-political dilemmas and opportunities faced by the car industry in developed as well as developing countries at the start of the 21st century. All major regional integration initiatives are covered and their feasibility is assessed, including go-it-alone efforts. This volume - written by leading scholars who have participated to the GERPISA international network's four-year research programme *Globalization or Regionalisation for the Auto Industry?* - is intended for both academics and practitioners/managers.
