Individuals with disabilities that impede their range of motion often have difficulty accessing technologies. With the use of computer-based assistive technology, devices, tools, and services can be used to maintain and improve the functional capabilities of motor disabilities. Assistive Technologies and Computer Access for Motor Disabilities investigates solutions to the difficulties of impaired technology access by highlighting the principles, methods, and advanced technological solutions for those with motor impairments. This reference source is beneficial to academia, industry, and various professionals in disciplines such as rehabilitation science, occupational therapy, human-computer interface development, ergonomics, and teaching in inclusive and special education. This publication is integrated with its pair book Disability Informatics and Web Accessibility for Motor Limitations.

The fourth edition of Autism Spectrum Disorders: Identification, Education, and Treatment continues the mission of its predecessors: to present a comprehensive, readable, and up-to-date overview of the field of autism; one that links research, theory, and practice in ways that are accessible to students, practitioners, and parents. During the last decade, autism spectrum disorders (ASD) have emerged as the fastest growing developmental disability, and, in response to the dramatic increase in diagnoses, diagnostic criteria in the newly published DSM-5 are significantly different than they were in the DSM IV-R. The structure, content, and format of Autism Spectrum Disorders, 4th Edition have been revised to accommodate changes in the field and to illuminate the current state of the art in the study of autism. New information on early identification, transition education from adolescence through to adulthood, neurobiological research, and technology-based solutions is included.

What happens to "orphan" diseases that aren't big enough profit centers for the pharmaceutical industry or get caught in the web of government funding and academic research? Augie Nieto found out in the spring of 2005: At forty-seven years old he was diagnosed with ALS. Devastated, Augie struggled with depression and attempted suicide. When he awoke from a coma, with friends and family surrounding him, his sense of faith and mission were renewed. Fast-forward one year: Augie and his wife, Lynne, were profiled as "Real Heroes" on the Today show. Their determination to beat the disease had already led to major overhauls in the way ALS research was conducted. In partnership with the Muscular Dystrophy Association, Augie had set up a foundation and lab to coordinate and oversee ALS research and testing across the globe. By centralizing operations and championing an entrepreneurial approach to medical research, Augie and his team accomplished remarkable results in less than two years. Part inspiration, part business innovation, Augie's Quest illustrates how one person can make a meaningful difference. Praise for Augie Nieto: George H. W. Bush, former U.S. president: "Your contributions to the fitness industry are well known, and your dedication an inspiration." Lance Armstrong, seven-time "Le Tour de France" champion: "I think it says a lot about Augie, the fact that everybody came together regardless of whether or not it's for competing gyms or competing companies that make equipment. They all say, this is one of our own; this is a guy who's committed his life to our industry and has been dealt a serious blow. We're going to be there for him, we're going to say, we're here for you and we're part of the Quest." Arnold Schwarzenegger, governor of California: "Your success has been incredible. But you are so much more than just a successful businessman. You are the greatest husband, a great father, and a terrific friend. So,

This textbook presents up-to-date strategies for transdisciplinary teams working with children who have multiple disabilities. Included in this practical guide is expanded information on developing an inclusive curriculum, integrating health care and education programs, using assistive technology, planning transitions, and addressing families' needs and concerns. An excellent text for undergraduate and graduate level students in special education.

Synthesizing the latest research and theory with compelling narratives and case vignettes, this book explores the development of emotional competence in school-age children and young adolescents. Saarni examines the formation of eight key emotional skills in relation to processes of self-understanding, socialization, and cognitive growth. The cultural and gender context of emotional experience is emphasized, and the role of moral disposition and other individual differences is considered. Tracing the connections between emotional competence, interpersonal relationships, and resilience in the face of stress, the book also explores why and what happens when development is delayed.

This book is about what it means to be a part of the autistic community. Autistic people wrote this book. Some autistic people are just learning about their autism. We wanted to welcome them and give them a lot of important information all in one place. This book talks about what autism is and how it affects our lives. It talks about our history, our community, and our rights. We wrote this book in plain language so that more people can understand it. We wrote this book for autistic people, but anyone can read it. If you are not autistic, this book can help you support autistic people you know. If you are wondering whether you might be autistic, this book can help you learn more. If you are autistic, think you might be autistic, or if you want to better understand autistic people, this book is for you. Welcome to the autistic community

More Than a Watchmaker is the autobiography of Rick Hohn, an amazingly accomplished man who was diagnosed at age two with cerebral palsy, which affects all four of his limbs and restricts his speech. The doctor who was diagnosing him told his parents that despite his severe disabilities he would be able to do anything, but make a watch. Her conclusion was shocking to them, but still encouraging. The doctor knew he had intelligence, but obviously lacked the fine-motor abilities to do intricate work. How true this diagnosis has been! Threading this theme throughout his autobiography, Rick Hohn glorifies God for having given him so many other abilities besides making watches. Broken at a young age from a deep depression, Rick struggled and persevered to become who he is today, a man of contagious joy. Now, having established his own ministry, he is an associate pastor for his church and guest speaks in other churches, schools and organizations around the country. As an evangelist, a motivational speaker, a consultant for DynaVox, (the manufacturer of speech-generated devices), an artist and an author, Rick gives his autobiography, an honest story, written from the heart, which is entertaining and encouraging to all. Rick's life is a testimony to his faith in God. He has accomplished so much more than just being able to handle the details on a tiny watch.

The fourth edition of the foundational, widely adopted AAC textbook Augmentative and Alternative Communication is the definitive introduction to AAC processes, interventions, and technologies that help people best meet their daily communication needs. Future teachers, SLPs, OTs, PTs, and other professionals will prepare for their work in the field with critical new information on advancing literacy skills; conducting effective, culturally appropriate assessment and intervention; selecting AAC vocabulary tailored to individual needs; using new consumer technologies as affordable, nonstigmatizing communication devices; promoting social competence supporting language learning and development; providing effective support to beginning communicators; planning inclusive education services for students with complex communication needs; and improving the communication of people with specific developmental disabilities and acquired disabilities. An essential core text for tomorrow's professionals--and a key reference for in-service practitioners--this fourth edition prepares readers to support the communicative competence of children and adults with a wide range of complex needs.

This book provides an in-depth review of the historical and state-of-the-art use of technology by and for individuals with autism. The design, development, deployment, and evaluation of interactive technologies for use by and with individuals with autism have been rapidly increasing over the last few decades. There is great promise for the use of these technologies to enrich lives, improve the experience of interventions, help with learning, facilitate communication, support data collection, and promote understanding. Emerging technologies in this area also have the potential to enhance assessment and diagnosis of autism, to understand the nature and lived experience of autism, and to help researchers conduct basic and applied research. The intention of this book is to give readers a comprehensive background for understanding what work has already been completed and its impact as well as what promises and challenges lie ahead. A large majority of existing technologies have been designed for autistic children, there is increased interest in technology 's intersection with the lived experiences of autistic adults. By providing a classification scheme and general review, this book can help technology designers, researchers, autistic people, and their advocates better understand how technologies have been successful or unsuccessful, what problems remain open, and where innovations can further address challenges and opportunities for individuals with autism and the variety of stakeholders connected to them.
