Deconstruction is a philosophical movement spearheaded by French thinker Jacques Derrida and other critics during the 1960s. As a literary theory, it focuses on exposing cultural biases in all texts, whether a passage in a popular book or the flashing script of a television ad. This book engages with the question of what makes Europe postcolonial and how memory, whiteness and religion figure in representations and manifestations of European 'identity' and self-perception. To deconstruct Europe is necessary as its definition is now contested more than ever, both internally (through the proliferation of ethnic, religious, regional differences) and externally (Europe expanding its boundaries but closing its borders). This edited volume explores a number

of theoretical discussions on the meaning of Europe and proposes analyzing some of the deeds committed, both today and in the past, in the name of Europe by foregrounding a postcolonial approach. To deconstruct Europe as a postcolonial place does not imply that Europe's imperial past is over, but on the contrary that Europe's idea of self, and of its polity, is still struggling with the continuing hold of colonialist and imperialist attitudes. The objective of this volume is to account for historical legacies which have been denied, forgotten or silenced, such as the histories of minor and peripheral colonialisms (Nordic colonialisms or Austrian, Spanish and Italian colonialism) and to account for

the realities of geographical margins within Europe, such as the Mediterranean and the Eastern border while tracing alternative models for solidarity and conviviality. The chapters deal with social and political formations as well as cultural and artistic practices drawing from different disciplinary backgrounds and methodological traditions. As such it creates an innovative space for comparative and cross-disciplinary exchanges. This book was previously published as a special issue of the journal *Social Identities*.

Since the early 1970s, social psychology has been in crisis. At the time *Reconstructing Social Psychology* (Armistead) provided

a critical review of theories and assumptions in the discipline. Originally published in 1990, this title not only updates that review but illustrates the ways in which assumptions had changed at the time. The crisis is no longer seen as one which can be resolved within social psychology itself, but rather as one more deeply rooted in modern society. The contributors look at the issues raised by deconstruction in the other human sciences, as well as investigating the claims made by social psychology as a discipline. They examine the rhetoric and texts of social psychology, analysing how the texts which hold the discipline together obtain their power. The arguments include the political implications

of deconstructive ideas, focusing on particular issues such as research, therapy and feminism. Deconstructing Social Psychology presents a strong selection of new critical writing in social psychology. It will still be a useful text for students of psychology, social science, and sociology, and for those working in the area of language.

There have been many attempts to define the generation of students who emerged with the Web and new digital technologies in the early 1990s. The term "digital native" refers to the generation born after 1980, which has grown up in a world where digital technologies and the internet are a normal part of

everyday life. Young people belonging to this generation are therefore supposed to be "native" to the digital lifestyle, always connected to the internet and comfortable with a range of cutting-edge technologies.

Deconstructing Digital Natives offers the most balanced, research-based view of this group to date. Existing studies of digital natives lack application to specific disciplines or conditions, ignoring the differences of educational fields and gender. How, and how much, are learners changing in the digital age? How can a more pluralistic understanding of these learners be developed?

Contributors to this volume produce an international overview of developments in digital literacy

In this major revision and expansion of the classic 20th Century Theology (1992), coauthored with Stanley J. Grenz, Roger Olson tells the full story of modern theology from Descartes to Caputo, from the Kantian revolution to postmodernism, now recast in terms of how theologians have accommodated or rejected modernity.

development? How do actual lived childhoods connect with theories about child development? In this completely revised and updated edition, *Deconstructing Developmental Psychology* interrogates the assumptions and practices surrounding the psychology of child development, providing a critical evaluation of the role and contribution of developmental psychology within social practice. In the decade since the first edition was published, there have been many major changes. The role accorded childcare experts and the power of the 'psy complex' have, if anything, intensified. This book addresses how shifts in advanced capitalism have produced new

Developmental Psychology, and a new (and more punitive) range of institutional responses to children. It engages with the paradoxes of childhood in an era when young adults are increasingly economically dependent on their families, and in a political context of heightened insecurity. The new edition includes an updated review of developments in psychological theory (in attachment, evolutionary psychology, theory of mind, cultural-historical approaches), as well as updating and reflecting upon the changed focus on fathers and fathering. Coverage has been expanded to include more material on child rights debates, and a new chapter addresses practice dilemmas around child protection, which engages even more with the "raced" and gendered effects of current policies involving children. This engaging and accessible text provides key resources to inform better professional practice in social work, education and health contexts. It offers critical insights into the politics and procedures that have shaped developmental psychological knowledge. It will be essential reading for anyone working with children, or

many of these stories define non-white, non-European people as inferior, and women as marginal or incapable, we should be worried about what they are teaching our children to think. Margery Hourihan shows how teaching children to read books critically can help to prevent the establishment of negative attitudes, discourage aggression and promote values of emotion and creativity.
