This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. All over the world, economic inclusion has risen to the top of the development discourse. A well-performing education system is central to achieving inclusive development - but the challenge of improving educational outcomes has proven to be unexpectedly difficult. Access to education has increased, but quality remains low, with weaknesses in governance comprising an important part of the explanation. The Politics and Governance of Basic Education explores the balance between hierarchical and horizontal institutional arrangements for the public provision of basic education. Using the vivid example of South Africa, a country that had ambitious goals at the outset of its transition from apartheid to democracy, it explores how the interaction of politics and institutions affects educational outcomes. By examining lessons learned from how South Africa failed to achieve many of its goals, it constructs an innovative alternative strategy for making process, combining practical steps to achieve incremental gains to re-orient the system towards learning.

Since the dawn of colonialism in Southern Africa, the province of the Eastern Cape emerged as the cradle of African resistance against colonial oppression. A closer look at the province reveals opportunities for progress and ultimate resurgence of economic and social development; yet conflated by a myriad of challenges. This book brings together different perspectives and realities of the post-apartheid Eastern Cape to provide an in-depth exploration of the developmental dilemmas that the province faces. This book provides insightful reflections on development and its sustainability some 25 years since democracy, and specifically focuses on sociological and demographic realities in the areas of migration and its impact on families. The book further grapples with the role of the state in developing culture and heritage in the province, pointing to fundamental and multiple challenges of deprivation, unemployment and subsequent community resilience in a variety of sectors including health and education. While it provides a historical analysis of contextual issues facing the province, the book also highlights the agency of the people of the Eastern Cape in confronting challenges in leadership, accountability, citizen participation and service provision. The book will be useful for development scholars and practitioners who are interested in understanding the state of the province, and similar settings, and the degree to which it has emerged from the shadows of its colonial and apartheid legacies.

Elusive Equity chronicles South Africa's efforts to fashion a racially equitable state education system from the ashes of apartheid. The policymakers who came to power with Nelson Mandela in 1994 inherited an education system designed to further the racist goals of apartheid. Their massive challenge was to transform that system, which lavished human and financial resources on schools serving white students while systematically starving those serving African, coloured, and Indian learners, into one that would offer quality education to all persons, regardless of their race. Edward Fiske and Helen Ladd describe and evaluate the strategies that South Africa pursued in its quest for racial equity. They draw on previously unpublished data, interviews with key officials, and visits to dozens of schools to describe the changes made in school finance, teacher assignment policies, governance, curriculum, higher education, and other areas. They conclude that the country has made remarkable progress toward equity in the sense of equal treatment of persons of all races. For several reasons, however, the country has been far less successful in promoting equal educational opportunity or educational adequacy. Thus equity has remained elusive. The book is unique in combining the perceptive observations of a skilled education journalist with the analytical skills of an academic policy expert. Richly textured descriptions of how South Africa's education reforms have affected schools at the grass-roots level are combined with careful analysis of enrollment, governance, and budget data at the school, provincial, and national levels. The result is a compelling and comprehensive study of South Africa's first decade of education reform in the post-apartheid period.

This book focuses on how politics shapes the capacity and commitment of elites to tackle the learning crisis in six developing countries. It deploys a new conceptual framework to show how the type of political settlement shapes the level of elite commitment and state capacity to improving learning outcomes.

The book is the result of a five-year project that culminated (within the first three years) in doctoral research interrogating language competency for meaningful mathematics instruction at upper primary level conducted at University of Stellenbosch in 2017; and this book in the succeeding two years. The initial research project received countrywide coverage in several South African media outlets including Times Live and Radio 2000.

It is over 40 years since Coombs (1967) first drew attention to the World Education Crisis, and specifically problems in the educational systems of countries in the developing world. Today, many of these problems remain, and are most visible in the educational systems of countries in sub-Saharan Africa. A large number of children remain out of school and for those who do enrol, less than half complete the primary education cycle. More worrying is the fact that those who do complete primary schooling leave with unacceptably low levels of knowledge and skills. The problems of access to education, and the quality of learning opportunities and learning outcomes are unevenly spread between rural and urban areas, better- and worse-off constituencies, and between boys and girls. This raises questions about the nature of the state and its commitment to equality and equity for all. The chapters in this volume argue that quality, equity and democratic accountability are inseparable objectives in the quest to strengthen and improve educational systems in the developing world. Between them they highlight the specific problems of quality, equity and democratic accountability in a number of African educational systems, and provide useful insights into ongoing work by national governments and international donor agencies to remedy these shortcomings.

The work of creating the future is being done now . and much of it is unsustainable in terms of natural and cultural resources. How will the next generation of leadership for environmental sustainability be raised up? Can we imagine sustainable futures, and can we enable transformative leadership to help us realize them? How can we best ensure that the several generations share their particular knowledge? What are the ethical frameworks, methodologies, curricula, and tools necessary for advancing and strengthening education for intergenerational sustainability learning and leadership? In this book, 82 authors from 26 countries across 6 continents seek answers in 32 essays to the many questions related to the intergenerational collaboration that holds promise for creating sustainable futures. The authors themselves represent a diversity of geography, gender, and generation . and include the institutions comprising the emerging International Intergenerational Net-work of Centers. They speak to key principles, perspectives, and praxes at the intersection of intergenerational learning and transformative leadership in the context of education for sustainability. A visionary tour de force, this book explores the challenges and complexities of future learning models beyond the UN Decade of Education for Sustainable Development. It provides a timely discourse encompassing intergenerational and cultural dimensions, including ethics. Contributors articulate a deeper understanding of leadership in the post-Enlightenment era. Chapters in the book offer examples cutting across a diverse range of experiences worldwide, making this volume not only refreshing for practitioners, but also invaluable to policy-makers. . Dzulkiifi Abdul Razak President, International Association of Universities Former Vice-Chancellor, Universiti Sains Malaysia These are critical times for the global community. Big issues are on the table: security, climate change, environmental destabilization, disease, hunger, and others. Actions we take today must embrace lessons from the past, present realities, and the rights and interests of future generations. Indeed, intergenerational learning is vital to education for sustainable development. This book makes a very timely and urgent call, challenging our traditional learning approaches and inviting us to dig deeper, stretch our minds wider, and see farther. . Akpezi Ogbuigwe Former Head of Environmental Education and Training, United Nations Environment Programme Executive Chairperson, Anpez Center for Environment and Development, Port Harcourt, Nigeria Achieving sustainable development requires generations, young and old, to engage with and learn from each other, and for leadership to embrace change. That is one of the key messages of this remarkable book. I wish I had this book when I took up the leadership role of my university two decades ago. I wish I could have given this book to my sons as they started their university education. . Goolam Mohamedbhai Former Secretary-General, Association of African Universities Honorary President, International Association of Universities

This global collection brings a new perspective to the field of comparative education by presenting trust, capacity and accountability as the three building blocks of education systems and education system reform. In exploring how these three factors relate to student learning outcomes across different international contexts, this book provides a powerful framework for a more equal system. Drawing upon research and case studies from scholars, policymakers and experts from international agencies across five continents, this book shows how trust, capacity and accountability interact in ways and with consequences that vary among countries, pointing readers towards understanding potential leverage points for system change. Trust, Accountability, and Capacity in Education System Reform illuminates how these three concepts are embedded in an institutional context temporally, socially and institutionally and offers an analysis that will be of use to researchers, policymakers and agencies working in comparative education and towards education system reform. Chapter 11 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution 2.0 Generic license available at <http://www.taylorfrancis.com/books/e/9780429344855>

Public Sector Reform in South Africa 1994-2021 is an examination of specific public sector reforms in three core Public Administration areas in the democratic South Africa: political-administrative relationships, the delegation of authority to senior managers and performance management.

The Centre for Child Law commissioned this study by Cornerstone Economic Research, to track school infrastructure spending and delivery. The report, written by Carmen Abdoll and Conrad Barberton, makes the concerning finding that the national Department of Basic Education has woefully underspent the School Infrastructure Backlog grant for two years running. In 2011/2012 spending was a little over 10 per cent and only at 23 per cent in 2012/2013 at the end of the third quarter. The ASIDI target for the number of schools to be built in 2011/2012 and 2012/2013 was 49. However, only 10 had been completed by the end of the first year. They predict that if the DBE continues at the same delivery rate, a realistic timeframe for the eradication of schools with inappropriate structures is probably 2023/24. They make recommendations which, if followed, could shorten the delay significantly. This study shows the importance of monitoring and evaluating progress against court orders and out of court settlements, to ensure that the right to a basic education is made real.
