It distills a difficult subject into plain English. It is clear that the author is well versed in the subject matter. I recommend this book highly." - Marla Durben Hirsch ...I also love a later section where Jim Tate provides some practical strategy advice on how a clinic should approach meaningful use. I know I'll be keeping my copy of The Incentive Roadmap(r) close by as a reference. It's a lot easier to go through than the HHS/CMS/ONC websites. - John Lynn, EHR blogger, emrandhipaa.com Written by Jim Tate, a nationally recognized expert on the CMS EHR Incentive Program, certified technology and Meaningful Use objectives. The Incentive Roadmap(r) is currently in use by practices around the country as the "go-to" manual on achieving meaningful use. In addition to new material, it provides end-to-end guidance to eligible providers and practices on the right way to successfully meet all the requirements for receiving incentives and covers: * Which incentive program to select * How to become a meaningful user * The registration process * Details on certification * Meaningful Use for Specialists This manual looks at what steps you will need to take to get ready for meaningful use.

After attending numerous CME's, volunteering in many health screening camps, engaging in intellectual healthcare discussions, and assisting a number of Physicians in their efforts to implement EHR/participate in the EHR incentive program.....I have repeatedly heard Physicians say, "Someone should write a book on this!". In an effort to reach out to as many Physicians as possible who share a similar concern, it gives me great honor to introduce to you, "Meaningful Use Guide for Physicians". In May of 2014, CMS announced that more than half of the eligible health care providers have been paid under the EHR Incentive Program. The advantages of implementing EHR/participating in the EHR incentive program are two-fold:Financial Benefits:1) Billions of dollars are available in incentive payments for eligible professionals in the U.S.2) Every Physician has the opportunity to receive up to \$44,000 - \$64,000 for achieving Meaningful Use before 20163) In May of 2014, CMS announced that more than half of the eligible health care providers have been paid under the EHR Incentive Program.4) Starting in 2016, there will be mandatory reductions in Medicare payments to eligible professionals who have not implemented EHR.Non-Financial Benefits:1) Improve quality, safety and efficiency of health care.2) Promotes patient engagement via patient health records program (PHR) and improved care coordination by creating patient portals.3) Promotes patient privacy and secure exchange of health information.In this book, I have addressed topics such as Obama Care, HITECH ACT, Meaningful Use, EHR incentive program along with its implementation, patient engagement, patient portals, HIPAA Security Compliance, CMS deadlines, CMS reporting periods, CMS audits, and challenges/solutions to Meaningful Use (MU) in Practices. The goal of this book, "Meaningful Use Guide for Physicians", is as follows: To help Physicians understand the concept of Meaningful Use along with the repercussions of not implementing EHR, to help understand both the financial as well as the non-financial benefits of participating in the EHR incentive program, and most important of all, to help physicians understand how the concept of Meaningful Use benefits not only Physicians but patients as well.Finally, I have gone one step further in "Meaningful Use Guide for Physicians" by advising an action plan for both initiation and sustainment of Meaningful Use.

This User ' s Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User ' s Guide was created by researchers affiliated with AHRQ ' s Effective Health Care Program, particularly those who participated in AHRQ ' s DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
