The field of general anatomy has been revolutionized by powerful new computational techniques in image processing and modalities such as computer-aided tomography (CAT) and magnetic resonance imaging (MRI). It is, therefore, an appropriate topic to be included in this series that studies the marriage of computer capabilities and medical imaging, exemplifying a significant illustration of relatively recent, valuable technologies known as the second industrial revolution. Among the issues studied in this book are boundary detection and the applications of image segmentation; functional imaging; the registration of scans of patients undergoing cranio-maxillo-facial surgery; image processing techniques for the classification of liver images; knowledge-based diagnosis support for mammogram image analysis; and input function monitors. This book clearly reveals the effectiveness and great significance of general anatomy techniques available, and, with further development, the essential role they will play in the future.

Artificial intelligence (AI) in its various forms - machine learning, chatbots, robots, agents, etc. - is increasingly being seen as a core component of enterprise business workflow and information management systems. The current promise and hype around AI are being driven by software vendors, academic research projects, and startups. However, we posit that the greatest promise and potential for AI lies in the enterprise with its applications touching all organizational facets. With increasing business process and workflow maturity, coupled with recent trends in cloud computing, datafication, IoT, cybersecurity, and advanced analytics, there is an understanding that the challenges of tomorrow cannot be solely addressed by today's people, processes, and products. There is still considerable mystery, hype, and fear about AI in today's world. A considerable amount of current discourse focuses on a dystopian future that could adversely affect humanity. Such opinions, with understandable fear of the unknown, don't consider the history of human innovation, the current state of business and technology, or the primarily augmentative nature of tomorrow's AI. This book demystifies AI for the enterprise. It takes readers from the basics (definitions, state-of-the-art, etc.) to a multi-industry journey, and concludes with expert advice on everything an organization must do to succeed. Along the way, we debunk myths, provide practical pointers, and include best practices with applicable vignettes. AI brings to enterprise the capabilities that promise new ways by which professionals can address both mundane and interesting challenges more efficiently, effectively, and collaboratively (with humans). The opportunity for tomorrow's enterprise is to augment existing teams and resources with the power of AI in order to gain competitive advantage, discover new business models, establish or optimize new revenues, and achieve better customer and user satisfaction.

In the current market scenario, packaging provides the most important first point of contact by which a company presents its products to consumers. Though packaging has to perform functions such as product protection and preservation, it is now being accepted as a value addition process. This compact textbook is designed primarily for the undergraduate students of printing technology and mechanical engineering. The text introduces the concepts and techniques relevant to packaging of industrial, pharmaceutical and food products. It covers the package design concepts with emphasis on graphics and colours, as innovation in packaging is taking place at a rapid pace due to the competition among brands for shelf appeal and space. Besides, it also discusses importance of glass as a packaging material, label types and their design, bulk packaging and test procedures on package to evaluate its worthiness in distribution and storage. In the second edition, the book has been updated wherever necessary. Chapter 7 on "Plastics and Speciality Packaging" has been

completely overhauled and split to introduce a new chapter on Package Finishing and Security (Chapter 8). Thus, in contrast to eight chapters of the previous edition, the book now comprises total nine chapters. Besides undergraduate students, this book will also be useful for diploma students of packaging, researchers and professionals in printing and packaging field. Key Features

- A Case Study lends a practical orientation towards the subject of study.
- Review questions, arranged in a graded manner, sharpen the analytical skills of the students.
- Solved problems reinforce the understanding of the subject.

Salient Features: Provided simple step by step explanations to motivate self study of the subject. Free hand sketching techniques are provided. Worksheets for free hand practice are provided. A new chapter on Computer Aided Design and Drawing (CADD) is added.

this book includes Geometrical Drawing & Computer Aided Drafting in First Angle Projection. Useful for the students of B.E./B.Tech for different Technological Universities of India. Covers all the topics of engineering drawing with simple explanation.

Following the national engineering curriculum, this title contains competency-based training requirements and Australian standards.
